AFS METALCASTING CONGRESS

April 23 – 25, 2024
Milwaukee, WI

Dear AFS Members and Friends,

On behalf of the American Foundry Society, welcome to Milwaukee and Metalcasting Congress 2024! We are delighted to have you join us for North America's premier foundry industry event.

The theme this year is "Momentum in Metalcasting." You'll see that theme playing out throughout the show. Metalcasting Congress offers one-of-a-kind opportunities for learning, networking, and exploration. I encourage you to engage with the exhibits, attend educational sessions and keynotes, and connect with fellow industry professionals. Building relationships with peers can lead to valuable collaborations and insights that drive innovation in metalcasting.

AFS extends its sincere gratitude to our presenters, volunteers, sponsors, and exhibitors. Your investment in Metalcasting Congress and AFS contributes to the vitality of this event, and indeed, of our whole industry.

If you have any questions or suggestions, please feel free to approach any AFS employee or visit us in The AFS Hub in the exhibit hall. You'll recognize AFS staff by their blue shirts.

Again, thank you for your dedication to metalcasting and for being part of Metalcasting Congress 2024. I wish you a fulfilling and productive experience during your time here.

Warm regards,

Doug Kurkul
CEO, American Foundry Society

SAND CORES AND MOLDS - ADDITIVE **or** CONVENTIONAL?

**Dual
PATH**

Or Both!

Humtown's Dual Path Process gives
OEMs and foundries the best of both worlds.

Sometimes Conventional manufacturing isn't enough to achieve speed to market. That's why Humtown has created an accelerated solution – **The Dual Path Process**.

While conventional tooling is being created, Humtown Additive starts 3D printing the sand cores and molds necessary for the foundry to begin pouring — shipping begins in as fast as 1 to 2 weeks. Finally, when the tooling has been completed, Humtown Products takes over with conventional production — shipping the order in mass. If the quantities exceed the conventional tooling capacity, we can always supplement production with 3D sand printing. By offering both conventional and 3D printing processes, Humtown is able to meet your needs, no matter which manufacturing process is best for the job ... or maybe both. We've got you covered!

**Contact Brandon Lamoncha or CR Peterson to see how
Humtown can increase your speed to market!**

The traditional book for registering your years of volunteer service in the metalcasting industry is located in AFS Store. AFS Members who have served the industry for five or more years are invited to register and receive their Volunteer Milestone Pins.

AFS reserves the right to any audio and video reproduction of any part of Metalcasting Congress 2024. Recordings (audio, video, still photography, etc.) intended for personal use, distribution, publication or copyright without the express written consent of the association and the individual authors or exhibitors are strictly prohibited.

Children under 16 are permitted if accompanied by an adult and with a signed waiver.

The Antitrust Policy Statement of the American Foundry Society is available to anyone attending Metalcasting Congress 2024. Copies are available in the AFS Show Office.

The American Foundry Society invites attendees to participate in AFS conferences, courses, committees and other events in a spirit of collegiality, collaboration, professionalism, and respect as we endeavor to advance AFS's mission—to provide members of the metalcasting supply chain with advocacy support, technical and management education, and access to innovative shared research and technology.

- Treat all attendees—including registrants, guests, speakers, volunteers, exhibitors, staff, service providers, and others in attendance—with respect and consideration.
- Respect the boundaries of others.
- Give permission that AFS can use pictures, videos and audio recordings taken during AFS-related events for AFS promotional purposes. AFS can use your likeness without remuneration.
- Be collegial and collaborative in your discussions, communicating openly and with civil attitudes.
- Respect confidentiality requests from speakers and other attendees. AFS Committee meetings allow for the open exchange of information and are confidential to those in attendance.
- Obey all applicable laws, rules and policies. These include rules and policies of the meeting venue, hotels, or any other site where your AFS affiliation is likely to be displayed.
- Look out for one another. Immediately alert emergency services, meeting or property security personnel, AFS staff, or AFS leadership if you notice someone in distress or see a dangerous or potentially dangerous situation.

- Physical or verbal abuse of any attendee.
- Being disruptive, stalking, following, threatening, or intimidating anyone.
- Drinking excessively or becoming intoxicated.
- Harassment of any kind, including unwelcome sexual attention and inappropriate physical conduct.
- Making comments or engaging in conduct that is racist, sexist, ageist, or otherwise discriminates against or is offensive to a group or class of people.
- Audio or video recording or taking images of another's presentation, posters, or materials without permission.
- Meetings may be recorded by AFS staff for business purposes. Any recordings or transcription by the participants or through artificial intelligence, present or not, is prohibited.

If, while at an AFS event, you are personally involved in an incident, or you witness an incident involving others that violates this Code of Conduct, please let AFS staff know about it immediately. You can speak directly with a member of the AFS staff leadership concerning an incident, or you can use a name-optional reporting form that will soon be a part of the AFS website.

If you experience or witness behavior that is an imminent or serious threat to public safety or is a criminal act, you should take action to maintain your own personal safety and contact 911 emergency services immediately.

AFS is committed to providing our members and event attendees with a quality experience. We take any violation of the above standards extremely seriously. AFS reserves the right to bar any person who violates this Code of Conduct from further participation in the event without refund. AFS may also suspend or expel any person who violates this Code of Conduct from AFS membership or from attending or participating in future AFS events.

Special Events

Volunteer Leadership Awards Luncheon

Tuesday, April 23 | 11:45 a.m. – 1:15 p.m.
Room: 102ABCDE – 100 Level | Ticketed Event – \$75

Join us for a fun, fast-paced awards luncheon, which combines the former Division Recognition Luncheon and President’s Luncheon & Annual Business Meeting. Catch up with friends while AFS officers welcome four new board members. The AFS Technical and Management Division chairs will also present key national and divisional awards including the presentation of the Scientific Merit and Service Citation awards.

Annual Reception & Banquet

Tuesday, April 23 | Cashless bar reception 6 – 7 p.m.
Hilton Milwaukee City Center - Crystal Ballroom
Banquet 7 – 9 p.m. | Hilton Milwaukee City Center – Crystal Ballroom | Ticketed Event - \$135

Join us for business networking and the presentation of the highest AFS honors, the Gold Medals. The cashless bar opens at 6 p.m. The awards presentation and banquet start at 7 p.m. The President’s After-Party starts at 9 p.m. Recommended dress is business formal.

Women in Metalcasting Breakfast

Wednesday, April 24 | 7:30 – 9 a.m.
Room: 102ABCDE – 100 Level | RSVP required

This event is open to members of Women in Metalcasting. It includes a continental breakfast, networking, and the presentation of the 2024 Women in Metalcasting Award for Excellence. For more information or to RSVP for this event, contact WIM liaison Katie Matticks at kmatticks@afsinc.org.

Sponsored by:

Past Presidents’ Luncheon

Wednesday, April 24 | 11:30 a.m. – 1:30 p.m. | Capital Grille
Must be a previous AFS President to attend

The annual gathering for all past AFS Presidents.

Exhibit Floor Reception

Wednesday, April 24 | 4:30 p.m.
Hall AB – 300 Level | Open to all attendees

Attendees are encouraged to mingle on the exhibit floor with exhibitors. Enjoy appetizers and refreshments.

Young Professionals Reception

Wednesday, April 24 | 5 – 6 p.m.
103CD – 100 Level | Open to all attendees

Join members of the AFS Young Professionals and other industry professionals for a fun networking event for rising leaders. No prior registration necessary. All attendees are welcome. For more information, contact AFS Young Professionals liaison Cathy Potts at cpotts@afsinc.org.

Sponsored by:

Alumni Dinner

Wednesday, April 24 | 6 – 9 p.m. | Harley-Davidson Museum
Must be a member of AFS Alumni to attend
Ticketed Event - \$145

Alumni will experience the Harley-Davidson Museum, touring the vast collection of Harley-Davidson motorcycles and rare memorabilia. A shuttle bus will be available to transport Alumni to and from the event. Shuttle bus will be located at the Wells Street entrance at 5:30 p.m. Departure at 5:45 p.m. *Must be AFS Alumni to attend.*

Copper Division Breakfast

Thursday, April 25 | 7 a.m. | Ticketed Event – \$65
100 Level – Room: 102ABCDE

The Copper Division will present their annual awards during this breakfast, which is open to everyone with an interest in copper alloys.

The AFS Hub

Booth 429

The AFS Hub is a dedicated area for connecting with AFS staff and other attendees. Visit the AFS Hub to enjoy a cup of coffee, or charge your phone while networking with peers. This area also features AFS Products & Services, Casting of the Year winners, the SFSA Casting Dreams Competition, and sessions for the Casting Designers & Buyers Track.

Casting Designers & Buyers Track

Casting Designers & Buyers Track sessions run Wednesday and Thursday in the Casting Source Theater at the AFS Hub. These sessions are available to all Metalcasting Congress 2024 attendees.

The Casting Source Theater is sponsored by:

AFS Hub Powered Tables sponsored by:

IJMC/FEF Student Research Competition

Wednesday, April 24 | 11:45 a.m. – 12:45 p.m.

The IJMC/FEF Student Research Competition empowers top undergraduate college students to showcase their metalcasting research projects at Metalcasting Congress. Winners earn scholarships and are published in the International Journal of Metalcasting. All submissions are judged by a leading panel comprised of the AFS Research Board and officers of the AFS Technical Council. Up to \$4,000 in total scholarships will be awarded.

The AFS Store

Atrium – 200 Level

The premier bookseller for people in the metalcasting industry. Practical and technical publications will be on hand, along with signature clothing and gift items.

Keynote & Hoyt Lecture Speakers

Tuesday, April 23, 10:30 – 11:30 a.m.
Leadership in Uncertain Times

Mike Pompeo
70th U.S. Secretary of State, 6th CIA Director, and Executive Chairman at Impact Investments

Join us for a fascinating keynote by Mike Pompeo, the remarkable American leader who has held the roles of both U.S. Secretary of State and CIA Director. His talk on “Leadership in Uncertain Times” is guaranteed to captivate attendees and deliver an important message for the metalcasting industry.

Pompeo’s journey includes graduating top of his class at West Point, leading troops along the Iron Curtain, and earning a degree from Harvard Law School. He transitioned from aerospace and energy to Congress and later became the nation’s most senior spy when he took the helm of the CIA. As the 70th Secretary of State, he championed American values and prioritized the nation’s interests.

During his tenure as Secretary of State, the U.S. became a significant energy exporter, achieved a milestone in the Middle East through the Abraham Accords, and hosted the largest human rights gatherings at the State Department. Pompeo is also the author of “Never Give an Inch: Fighting for the America I Love.”

Wednesday, April 24, 10:30 – 11:30 a.m.
Hoyt Memorial Lecture: Embracing Adversity – Mining the Riches from Life’s Challenges

Mike Lenahan
AFS Past President; Executive Vice President - Industrial Sales, Badger Mining Corp.

Life is unpredictable and often presents significant challenges and hardships. These challenges and hardships do not determine our ultimate destination, but rather give us an opportunity to grow and find new meaning. Adversity often allows us to expand our vision, renew and restore our appreciation, and develop new skill sets to thrive.

Mike Lenahan is Executive Vice President - Industrial Sales at Badger Mining Corporation. A graduate of Bowling Green State and Notre Dame, Lenahan started his career at Sand Products of Cleveland in 1987. He has since become an expert on foundry sands and foundry recycling, having authored multiple papers on both topics. Lenahan is a Past President of AFS. He has been an active member of several AFS chapters and is a past chair of the EHS Division and Government Affairs Division. Lenahan also has served on the board of the Ohio Cast Metals Association and as secretary-treasurer of the Foundry Association of Michigan.

Thursday, April 25, 10:30 – 11:30 a.m.
Successful Succession Strategies for Manufacturers of Every Size

Meredith Elliott Powell
Business Growth Strategist and Author of “Who Comes Next: Leadership Succession Planning Made Easy”

Meridith Elliott Powell is an award-winning author, keynote speaker, and business strategist. With a background in corporate leadership and sales, her career expands over several industries, including banking, healthcare, and finance. Powell worked her way up from entry-level jobs to earn her position in the C-Suite.

She is a member of the Speaker Hall of Fame, Vice Chair of the National Speakers Association, a Master Certified Business Growth Strategist, a Certified Executive Coach, and a Certified Speaking Professional. In addition, Powell is an invitation-only author for LinkedIn, with more than 600,000 learners taking her courses around the world.

Adam Kopper
Brunswick Corp., Fond du Lac, WI

The Effect of Coating Type on Extraction Loads for Steel Core Pins in Aluminum Permanent Mold Castings (24-008)

An investigation has been performed to determine if permanent PVD coatings applied to critical portions of a casting die could be beneficial for aluminum permanent mold casting, thereby enabling the reduction of the need for conventional lubricants. A laboratory test has been fabricated to provide a quantitative measurement of the force needed to extract a core pin from solidified aluminum alloys. The test involves

Stephen Midson, Colorado School of Mines, Golden, CO

pouring molten aluminum alloy A356 into a crucible containing a tapered H13 steel core pin, and once the alloy has cooled to 400 deg-C, a tensile testing load cell is used to monitor the load necessary to extract the pin. Five different conditions have been examined, including a bare (un-coated) steel pin, sprayed graphite and boron nitride coatings, a silicon-doped DLC, and an AlCrN coating. The measured extraction loads and load-time curves will be reviewed, along with the surface condition of the pins after extraction.

Thermal Management of Molds (24-027)

Diran Apelian, Carl Soderhjelm, and Cheolmin Ahn, University of California-Irvine, Irvine, CA

Thermal management plays a pivotal role in the production of high-quality castings and the reduction of production cycle time by ensuring desired solidification patterns during dynamic casting processes such as in permanent mold and die casting processes. These processes require rapid heat removal and careful heat recovery for subsequent casting cycles, unlike traditional batch processes. Moreover, thermal management in specific localized regions of the mold are needed due to diverse mold geometries and shapes, as well as applications such as in gigacasting. Various thermal technologies were evaluated quantitatively through both modeling and experiments. considering analyses of kinetic, heat flux, and heat transfer coefficients. Moreover, the development of self-regulating molds incorporating phase change materials (PCMs) shows promise in leveraging the latent heat of PCMs for local heating and cooling during the dynamic casting process. These will be reviewed and discussed.

Cast Iron Division

Room: 202DE – Level 200

Session Chair:

David Gilson
SinterCast Inc., Brookfield, WI

Cast Iron Honorary Lecture: Powertrain Trends – The Outlook for Cast Iron (24-163)

Steve Dawson, SinterCast Ltd., Sunninghill, Berkshire, United Kingdom

With the united will of international governments, media, compliant industry and consumers, it seems inevitable that passenger cars are destined for electrification. The only question is the speed. But where are the trucks going? Full-size pick-ups are currently navigating the onset of electrification, but the initial results can best be described as a setback; both for OEM finances and for the electrification movement. In the Super Duty sector, OEM’s continue to inject billions into long term manufacturing facilities for the profitable internal combustion engines that finance their electrification programs. The prospects don’t become easier as we step up the food chain to long-haul heavy-duty trucks. Even in Europe, electric truck penetration remains below 1%. With growing concerns for range, total cost of ownership and the roll-out of refueling / recharging infrastructure, the trucking industry is beginning to contemplate alternative fuels rather than alternative powertrains. The debate is evolving from engines to energy. The presentation will provide an outlook for automotive powertrains in the US, Europe and Asia, and therefore, an outlook for the future demand for cast iron cylinder blocks and heads.

Engineering & Smart Manufacturing Division

Room: 201AB – Level 200

Session Chair:

Francois Audet
Foundry Solutions Metallurgical Services Inc., Quebec, Canada

Silver Anniversary Lecture: Thirty Years after QS-9000: Changing Requirements and Enduring Lessons (24-097)

Ted Schorn, Enkei America Inc., Columbus, IN

Ford, GM and Chrysler first published their automotive quality system standard in August of 1994. During the 1999 Casting Congress, paper 99-20 was presented, titled “Keeping the QS-9000 Process Alive: Strategies After Certification.” This paper provided advice regarding the proper application and implementation of a quality system that was mandated by the “Big Three” automotive OEMs at the time. This silver anniversary paper reviews the history of development and change in quality management systems over the last thirty years since QS-9000 was initially published. In this review the author offers insight into the abiding themes and enduring lessons for organizations seeking to make quality system certification value added.

Melting Methods & Materials Division

Room: 201C – Level 200

Session Chair:

Pat Leper
Saveway USA Corp., North
Canton, OH

Green Sand Molding Committee and EJ Experiences in Development & Implementation of Digital Active Clay Testing (24-194)

This panel will provide an experienced introduction to automatic mold pouring for ferrous and non-ferrous foundries. Refractory selection and channel loop designs will be presented along with the conversion from ladle pouring to automated pouring and operating a coreless furnace-based pouring system.

- **Transitioning from Ladle Pouring to Pressure Pouring Brass (24-159b)**
Andy Bain, Ford Meter Box Co. Inc., Carmel, IN
- **Pressure Pour Furnace Relining Methods: Pros, Cons and Loop Designs (24-159c)**
Morgan Kent, Saint-Gobain Ceramics & Plastics, Worcester, MA

*Andy Bain, Ford Meter Box Co. Inc., Carmel, IN;
Morgan Kent, Saint-Gobain Ceramics & Plastics,
Worcester, MA*

Molding Methods & Materials Division

Room: 202C – Level 200

Session Chair:

Tom Arenholz
Simpson Technologies Corp.,
Cedar Falls, IA

Digital Active Clay Measurement in Green Sand (24-022)

*James Springstead, Piao Tan, and Sam Ramrattan,
Western Michigan University, Kalamazoo, MI; Brian
Rachwitz, EJ, East Jordan, MI; Michelle Ring, Ductile
Iron Society, Carmel, IN; Stephen Neltner, REFCO-
TEC, Orrville, OH; Tom Arenholz, Simpson Technolo-
gies Corp., Aurora, IL; Scott Outman, Metal Technolo-
gies Inc., Three Rivers, MI*

The measurement of active clay in foundry green sands is an essential component in the control of the metal casting process. A new spectrophotometric test has been developed that offers a fast, qualitative measurement for active clay in green sands that does not require extensive training and experience. In this study, this new test is optimized and evaluated at three working foundries to determine viability as an alternative measurement of active clay in working foundry green sands. The variance of the optimized methods has been reviewed relative to the traditional methylene blue test using comparison within each foundry and a gage repeatability and reproducibility test. Furthermore, the new test offers a quantitative alternative to the traditional methylene blue test that is ideal for implementation in working foundries and automation in the future.

Green Sand Molding Committee and EJ Experiences in Development & Implementation of Digital Active Clay Testing (24-194)

Brian Rachwitz, EJ, East Jordan, MI

Experiences of the Green Sand Molding Committee's involvement in development of this new procedure will be presented. The presentation will also focus on an overview of real foundry experiences implementing and transitioning to the new Digital Active Clay Test procedure and a replacement for the Methylene Blue Active Clay Test. Lessons learned and helpful tips based on EJ experiences in converting to this new procedure will be reviewed.

mold handling systems

Summit brings the art of custom engineering and experience together to create mold handling systems that fit your foundry's production needs.

Efficient. Cost effective. Built to withstand years of harsh foundry abuse with little maintenance. Engineered to fit any matchplate molding machine.

Summit Foundry Systems custom engineers, manufactures, and installs mold handling systems that match your work flow patterns and floor configuration. From initial mold making to shakeout, Summit helps you move production to new levels of efficiency and cost effective production.

Call Summit today at **888-283-7740** and talk to one of our experienced engineers. Or, go online and visit us at www.summitfoundrysystems.com. *You will be glad you did.*

**Silver Anniversary Lecture:
A Quarter Century of Change
in Printing Molds and Cores,
An Evolution from the Direct
Shell Production Casting
Process (24-068)**

Kelley Kerns, HA-International, LLC, Westmont, IL

Additive manufacturing technologies emerged over 25 years ago with a technology known as Direct Shell Production Casting (DSPC) emerging as a viable process directly produce molds with in-situ cores to directly pour castings direct near-net shape parts. Innovation evolution has taken a fast track in 3D printing of cores and molds. This paper will review the generational developments in process technology, applications, materials, and adoption of the 3D printing in the metal casting industry.

**Fundamentals of
Ultrasonic Treatment of
Molten Aluminum (24-028)**

Raquel Jaime, University of California-Irvine, Irvine, CA; Diran Apelian and Carl Soderhjelm, Advanced Casting Research Center, Irvine, CA; Helder Puga, University of Minho, Guimarães

Session Chair:

*Luke Schimmel
Fairbanks Morse Engine,
Brodhead, WI*

Traditionally, molten aluminum requires various processing techniques prior to casting such as degassing to reduce porosity, filtration to reduce inclusion content, the addition of grain refiners to refine the grain structure, and the addition of chemical modifiers to alter the morphology of eutectic phases. The conventional techniques used for these purposes require the extensive use of purge gases and chemical additions. Ultrasonic Treatment (UST) is a novel processing method through which ultrasonic energy is introduced into molten metal for the purpose of modifying the cast microstructure. To optimize the efficiency of UST, it is necessary to examine the fundamental mechanisms and the solidification behavior of the metal under ultrasonics. The mechanisms of ultrasonic energy within molten metal will be discussed alongside how they influence specific applications without the use of external gases or chemical additions.

Method to Develop the Reduced Pressure Test (RPT) for Consistent Reliability and Accuracy for Everyday Foundry Operation – A Review (24-103)

The Reduced Pressure Test (RPT), also called the Vacuum Density Test (VDT), Vacuum Solidification Test (VST) or the original Straube-Pfeiffer test, has been used widely to gauge the porosity level of the castings to be manufactured. The size of the aluminum casting market in the US is 11.2B USD in 2021 and much of that industry relies on the low cost and effective RPT to validate metal quality before casting. However, there can be many pitfalls in conducting the RPT due to incorrect casting of the RPT test sample and during interpretation of the results in terms melt and casting quality. This manuscript will review best practices that can support not only industry but academic institutions to incorporate the RPT more effectively towards their work.

Cupola Case Study: Successful SiC Precast Brick Shape Melt Zone Lining Installation with Significant Efficiency and Cost Improvements (24-158)

A case study will be presented for a cupola shell replacement project upgrade, that included the installation of SiC Precast Brick Shapes with high abrasion thermal and chemical resistance. Careful attention to tuyere design parameters and subsequent disciplined regulation of Blast/Oxygen rates, has resulted in substantially reduced heat losses to the melt zone shell and refractory life that is approaching two to three years. The resultant cupola efficiency increase, reduced coke rates, and low refractory repair costs have resulted in substantial cost savings and GHG emission reductions. This presentation will be presented for an anonymous cupola plant.

David Kasun, ATD Engineering & Machine, Au Gres, MI; Angelo Petrucci, Allied Mineral Products, Hamilton, ON; Eric Gokey, Cadillac Casting, Cadillac, MI

Low CRI, High CSR Coke Trials – AFS Sponsored Research (24-090)

To improve coke performance in the cupola, the authors discovered that coke used in blast furnaces (Low CRI, High CSR) exhibits higher strength than foundry coke and may provide better performance due to larger coke pieces reaching the melt zone. Coke strength and sizing are extremely important in a cupola because the coke must reach the melt zone intact, stay in the melt zone long enough to replenish the coke bed, provide heat for melting and carbon pick-up to the liquid iron. This research evaluates the cupola performance difference between cokes of high and low CRI. In addition, efforts were made to identify differences in characteristics of these cokes.

Cooling Curves of Concentrated Alloys, Steelmaking Slag, and Lithium Iron Phosphate (24-017)

Over the past few years, a variety of melting casting projects have been carried out, in collaboration with industries and universities. Concentrated alloys and non-metallic compounds were studied including high-Si cast iron, high-Mn steel, Al-added stainless steel, high-entropy alloy, Permalloy 80 Ni alloy, Stellite Co alloy, steelmaking slag and lithium iron phosphate (LFP). A melt synthesis of LFP was developed. Cooling curves were measured using the thermal analysis (TA) cup method and differential thermal analysis (DTA). In addition, the phase diagrams of alloys were calculated using Thermo-Calc. This paper draws on some examples of the measured cooling curves to illustrate the thermal behaviors of melts, along with a quick review of each project.

Delin Li, CanmetMATERIALS, Natural Resources Canada, Hamilton, ON

A Theoretical and Experimental Approach to Hot Tear Prediction in Steels (24-006)

Steel alloy development continues to provide opportunities for foundries to enter new markets. However, traditional approaches to alloy development leave the examination of manufacturing issues for the later stages of development. Bringing casting considerations earlier in the development cycle should save money and time bringing new alloys to market. The hot tearing tendency of an alloy can be predicted during the early stages of alloy design. A hot cracking index was used to compare hot tearing tendency in both previous research and from experiments poured as part of this work. Cone castings were employed to create hot tears in three different alloys. The index predicted the same pattern as the observed hot tears. Interestingly, the freezing range also correlated with the hot tearing tendency of the steels. Therefore, it appears that the hot tearing behavior of an alloy can be predicted during the early alloy development stage.

Robert Tuttle and Demetrios Cortez, Western Michigan University, Kalamazoo, MI

Leadership in Uncertain Times (24-128)

Mike Pompeo, 70th U.S. Secretary of State, 6th CIA Director, and Executive Chairman at Impact Investments

Join us for a fascinating keynote by Mike Pompeo, the remarkable American leader who has held the roles of both U.S. Secretary of State and CIA Director. His talk on “Leadership in Uncertain Times” is guaranteed to captivate attendees and deliver an important message for the metalcasting industry.

Pompeo’s journey includes graduating top of his class at West Point, leading troops along the Iron Curtain, and earning a degree from Harvard Law School. He transitioned from aerospace and energy to Congress and later became the nation’s most senior spy when he took the helm of the CIA. As the 70th Secretary of State, he championed American values and prioritized the nation’s interests.

During his tenure as Secretary of State, the U.S. became a significant energy exporter, achieved a milestone in the Middle East through the Abraham Accords, and hosted the largest human rights gatherings at the State Department. Pompeo is also the author of “Never Give an Inch: Fighting for the America I Love.”

11:45 a.m. – 1:15 p.m.

Comparing Thermo-Mechanical Anisotropy in Disc-Shaped Specimens: A Case of 3D Printed Silica Sand and Ceramic Sand (24-059)

The purpose of this study is to compare the thermo-mechanical properties of a natural round grain silica sand and a synthetic ceramic sand. The two sands will be 3D printed in separate build boxes to produce disc-shaped specimens. Specimens are processed within a model where binder is applied to sand horizontally and vertically. The print orientation has a significant effect on longitudinal and radial displacement, and heat transfer properties. This indicates that 3D printed specimens have anisotropic characteristics caused by print orientation, which could result in unanticipated dimensional changes that lead to part rejection. Moreover, there are significant differences in thermal distortion measurements between the natural and synthetic media. Thermal distortion curves showing the anisotropic characteristics between silica and ceramic sands are provided.

Sam Ramrattan, Lee Wells, and Shantanu Phalke, Western Michigan University, Kalamazoo, MI; Peter Nakachima, Sintex Minerals & Services Inc., Rosenberg, TX

Updates on Advancing Developments for 3D Consumables - Resin Systems, Mold Coatings, Additives and Printhead Cleaners (24-153)

As 3D additive technology advances, so do the performance expectations on the consumables used in the 3D Sand Printing Process. We’ll cover the latest in resin technology, including IOB, coatings (surface smoothing), improved de-sand ability and sand additives that are available.

Observation of Flake Graphite Nucleation and Growth in Gray Iron through Interrupted Solidification and Inclusion Analysis (24-122)

Solidification and cooling of a hypoeutectic gray cast iron were interrupted at various stages by quenching the iron sampled with custom-made quartz molds in iced brine. The microstructure evolutions of the gray iron were interrupted and retained by quenching. A scanning electron microscope equipped with energy dispersive X-ray spectrometry and Automated Feature Analysis Software was used to characterize the flake graphite and non-metallic inclusions. Based on the area and perimeter information obtained, length and thickness of flake graphite in various stages of solidification and cooling were achieved. Growth rates of type A graphite along the prismatic and basal directions during eutectic reaction were determined as 1.4 μm/s and 0.02 μm/s respectively. Inclusion analysis indicated the significant role of manganese containing sulfide and oxysulfide inclusions on nucleating graphite in gray iron.

James Liggett, Mingzhi Xu, and Jingjing Qing, Georgia Southern University, Statesboro, GA

Comparison of Microstructure and Non-Metallic Inclusions in Top-Filled and Bottom-Filled Gray Iron Castings (24-130)

A bottom-filled rigging system was designed to produce gray iron castings, which was compared with a top-filled design in the present study. Filling and solidification of gray iron produced with the bottom-filled mold were compared with that for the top-filled mold. At similar cooling rate and solidification condition, the count of Type A graphite flakes was greater in the bottom-filled casting, while its graphite flakes were also finer in size. In addition, the statistical analysis of non-metallic inclusions using a scanning electron microscope equipped with Auto Feature Analysis software also showed differences in inclusion composition, size, and population density between two castings. The results indicated that the filling turbulence promoted interactions between metal with air, which in turn influenced the formations of non-metallic inclusions. As a result, this impacted the nucleation of flake graphite in the gray iron.

Evan Carter, Jingjing Qing, and Mingzhi Xu, Georgia Southern University, Statesboro, GA

Influence of Niobium on the Microstructure of Hypereutectic Gray Cast Iron (24-016)

The final properties of grey cast iron depend on graphite morphology. Additions of certain trace elements can improve or degrade these properties for constant carbon level. The goal of this research was to investigate the effect of different levels of niobium on the microstructure and nucleation propensity for hypereutectic gray cast irons. Cooling curves were recorded, and metallographic analysis was conducted on thermal analysis inoculated cups. It was found that niobium additions alter significantly the solidification process, modifying the morphology, type and size of graphite, the number of eutectic cells and the perlite spacing. These effects are more evident as the content of niobium increases. Early precipitation and growth of kish graphite (type C) seems to be reduced. Mn sulfides nucleating on complex oxides were detected as the main nuclei through SEM study. The formation of NbTi particles is directly related to the Nb content.

Why Industry 4.0? Connecting
Inputs to Assessments to KPIs
to Business Value (24-101)

Assessments designed to identify I4.0 implementation opportunities are commonplace. While many assessments are available, most have issues like ease of use, difficulty gathering honest inputs, disconnects between results and business value. This presentation focuses on I4.0’s assessment “what”, and includes the “why” (KPIs, savings opportunities, efficiency gains, culture improvements, etc.) and the “how” (the creation of plans leveraging AI/ML to assure the highest value action). UNI’s CBGI has developed an I4.0 assessment, and are in the process of simplifying use, automating connections to business value and the creation of action plans implementing I4.0 quickly, focused on value. We discuss the tool’s current development status at conference time, future streamlining plans (Including online data gathering tools and AI generated plans), and CI efforts for business value alignment. This research is sponsored by the DLA-Troop Support, Philadelphia, PA and the Defense Logistics Agency Information Operations, J68, Research & Development, Ft. Belvoir, VA.

Real Time Measurement of Mold
and Core Quality in Chemically
Bonded Sands (24-098)

This study presents a preliminary method to assess and predict the quality of chemically bonded sand molds through the use of embedded sensors. Utilizing miniature hardware, critical variables were measured and used as indicators of curing progression, ultimately predicting the 24-hour transverse strength of phenolic urethane no-bake and furan no-bake sand systems. Employing ANOVA and regression analyses, significant correlations were established between sensor data and strength prediction. This approach, if integrated into production, offers real-time evaluation with the potential to be automated by machine learning. While acknowledging the study’s limitations, this research introduces an innovative strategy for optimizing molding outcomes in the foundry industry through wireless, sensor-based monitoring.

O’Dell, University of Northern Iowa, Waterloo, IA

Fast Moisture, VOC, and
LOI Testing (24-061)

This study identifies the use of microwave (MW) and infrared (IR) heating technologies to achieve rapid MC, VOC, and LOI testing in a single unit. A prototype semi-automated tester has been developed using heating technologies capable of completing all three tests in series. The new testing technology allows for a short exposure time to heat a foundry sand sample and provides digital data for the three tests. The actual sample test time is comparable to an automated LOI test and is considerably faster than either the muffle furnace or microwave furnace. The standard of 3-hours for the muffle furnace, or 20 minutes for the microwave furnace is time consuming and requires separate samples for individual tests. This study will confirm there is no significant difference between the AFS Standard MC, VOC, and LOI test and a new semi-automated test.

Getting Creative with SPC
(Statistical Process Control)
(24-135)

Ted Schorn, Enkei America Inc., Columbus, IN

If you are using SPC in your facility, you are probably using a standard X-bar and R chart. Did you know that there are at least 30 different types of SPC charts, each with a specific best application in mind? Foundries can especially benefit from attribute control charts as reject rates, defect rates and inspection results require this type of chart to be used. These characteristics are extremely important to foundry quality but are seldom monitored statistically. Learn how to objectively monitor these crucial metrics.

Development of Improved Repair
Welding Alloy and Process for
Al-Cu Sand Castings (24-052)

David Weiss, Vision Materials, Manitowoc, WI; Gerald
Gegel, Material and Process Consultancy, Morton, IL

This project addresses important considerations in the welding of 200 series alloys, specifically castings produced from A206 alloy. This alloy is difficult to weld unless key process parameters are controlled. As the volume of the welded area increases, the difficulty is compounded. We show that control of temperature of the casting during welding is the most important process parameter for low defect welding with acceptable mechanical properties, assuming that basic good welding practices are followed. The weld filler rod is also an important consideration, with the most successful welds produced using 2319 alloy.

Effects of Strontium and Calcium
on Cast Al-Si Alloys and Their
Relevance to Secondary
Aluminum Alloys (24-048)

Gabriel Garcia, Nagasivamuni Balasubramani, Michael
Moodisparw, and Alan Luo, The Ohio State University,
Columbus, OH

Strontium (Sr) and calcium (Ca) have long been known as modifying elements in Al-Si alloys due to their effects on eutectic silicon, causing it to form finer platelets or a coral-like structure that is more beneficial to the ductility of the alloys. These elements have also been shown to modify Fe-intermetallics, suggesting a possible role in secondary aluminum alloys. Despite the microstructural benefits that can result from Sr and Ca additions, they are also surface-active elements that increase the hydrogen absorption of the melt. Calcium in particular is generally viewed as an impurity, as it not only results in more gas porosity, but is a relatively weak silicon modifier. Recent work suggests, however, that both Sr and Ca may play a more significant role in secondary aluminum alloys.

Improving Automated Green Sand Control of Water and Bond Addition using Optical Moisture Sensors (24-044)

Optical moisture sensing technology is applied to improve the control of water and bond additions into the muller. The optical moisture sensor measured moisture more accurately than conductivity-based measurements. New control algorithms using optical moisture sensing technology are applied to three different production systems for control of water and/or bond additions. With compactability fixed to a target, the optical moisture measurement correlated to the amount of new bond added to the muller signifying an adjustment in moisture to maintain a water-bond balance. In systems adjusting bond addition based upon control to an available bond target, the replacement of conductivity-based moisture with optical moisture measurement reduced clay and moisture variability. The optical moisture sensor has proved to be a valuable tool in providing better green sand system control and monitoring.

Applying 3D sand printing in your facility will be more successful the better you understand it and how it can be applied. We will review how it works and how to handle printed sand. We will also review some of the different binder options that are on the market.

**Advanced AM 3D Printed Sand
Mold Technologies to Support
Casting Supply (24-117)**

Greg Colvin, Honeywell Aerospace, Phoenix, AZ

U.S. casting supply has limited responsiveness for many high-integrity hardware especially for sporadic low-quantity demand military applications. AM provides an opportunity to augment the casting supply chain by filling gaps in supplier readiness. This presentation will discuss new advanced AM technologies that can be leveraged by the casting supply chain to improve their responsiveness to new casting orders. Technologies discussed will include improvements to 3D-printed-sand mold production methods. These will include improving sand mold surface roughness, reducing outgassing from 3D printed sand mold during casting and methods to reduce dimensional variation between repetitive mold builds. AM technologies available to build rapid tooling including machining fixtures and inspection tooling will. Advanced AM high-strength metallic and polymeric systems will be presented that can be leveraged for tooling and other applications.

*“The ARMS® System, by Inductotherm, is used
for our slagging process and anything else we
need it to do. It does a great job all around.”
Nathan B., Melt Technician–Lodge Cast Iron*

Scan to learn

Lodge and
Inductotherm!

Let the Robot Help

The ARMS® System was developed with safety in mind. Nathan B. recently expressed his satisfaction that the ARMS® System can perform its tasks with a single button press. He continued, “If you want to slag, you go to slag; if you want to take a sample, you go to sample. It does a great job and saves a lot of time.” Nathan also pointed out that the light curtain is a valuable safety feature that operators have come to depend on. If the light curtain is triggered, the system will stop movement of the robot to protect workers who may be unaware of their surroundings. Also, the system will not start if the furnace is not level or if the hood is not at the correct angle. In addition to keeping workers away from tedious slagging, molten metal, and heat, these extra safety features minimize the likelihood of accidents.

Effect of Mg Content on the Shear Strength of Al-Si-Mg and Al-Si-Cu Alloys at Elevated Temperatures (24-013)

Die soldering in the permanent mold casting process is observed to be aluminum bonded to the die surface and has historically been associated with Al-Fe intermetallics forming between the molten aluminum alloy and the die steel during the casting process. Researchers on the topic have recently been given a new thermomechanical model that rebuts the deep-rooted thermodynamics and kinetics-based theoretical understanding of soldering. This new model accounts for the strength of the aluminum alloy, specifically the shear strength, as a function of temperature. This work fills in the knowledge gap of die cast aluminum shear strength at elevated temperatures observed at the time of part ejection. To further test the model, varying amounts of magnesium was added to A356, A362, and A380 to increase the alloy shear strength. Data from the experiment shows the shear strength increased as with increasing amounts of magnesium even at higher temperatures.

Impact of Columnar Grains on Fatigue Performance of Aluminum Castings (24-109)

Laboratory life-to-failure methods, used to estimate aluminum casting fatigue durability, are critical for establishing intended lifespan service conditions. The Over-Stress Probe (OSP) method, which is widely used in academia and industry, has benefits and drawbacks in adequately providing a lifespan estimation. Normally, when an OSP protocol is followed, not all fatigue test samples are examined with fractography. Only a fatigue performance value is cited with any failures driving addition fatigue sample testing which contributes to delays and cost overruns for casting launch programs. Instead, the authors have utilized a more complete fractographic examination to help process developers understand the role of the casting parameters on fatigue performance. The authors have taken this approach with this manuscript on an OSP test regime which includes a total of 66 fatigue samples, all with fractographic observations of the flaw characterization and size that nucleated the fatigue fracture.

Installation of a Systems Spray-Cooled™ EAF Roof, Experiences, and the Reasons for Installation (24-010)

In 2008, a leading steel foundry in OH, successfully installed and commissioned a new spray-cooled roof to replace its existing refractory brick roof. The conversion from refractory to spray-cooling was done to reduce the refractory and maintenance costs associated with a brick roof, and to increase the availability and safety of their 20-ton EAF. This paper will describe the project as well as 16 years of experience with the operation and maintenance of the spray-cooled roof.

Louis Valentas, SYSTEMS Spray-Cooled, Cranberry Township, PA

Designing the Least Expensive Charge Mix using Data Analytics and Optimization for Grey Cast Iron (Grade FG 220) (24-065)

In this paper a data analytics driven decision making strategy has been reported for controlling and reducing the defects related to the prepared sand properties that are used in the sand-casting foundries. Three important sand-related defects, namely blow hole, sand inclusion, and erosion scab, have been analyzed for this purpose, and their root cause analysis has been performed utilizing historical data from the foundry spanning one year. Both qualitative and quantitative viewpoints have been presented in terms of change in

Deepak Chowdhary and Nilanjan Banerjee, MPM Infosoft Pvt. Ltd., Chennai, India

prepared sand properties with respect to the change in the amount of defects reported across the period of analysis. The results are further investigated by considering the quantity of additives added to the prepared sand used in foundries. The analysis suggested that the reduction in defects is strongly associated with the prepared sand properties and the amount of additives used during the period of analysis.

Alternative Eutectic Systems for High Conductivity Applications (24-029)

Enhancing thermal conductivity in aluminum alloys can drive superior performance and efficiency across diverse engineering applications, including EV powertrain components. While high pressure die casting (HPDC) relies on the predominant Al-Si system alloys such as 356, these alloys exhibit suboptimal thermal conductivity in their as-cast state. Although conductivity can be improved through costly heat treatments, limitations within the Al-Si alloy system persist. Alternative eutectic systems offer the potential in surpassing both mechanical and conductivity properties of the Al-Si system. However, there is a lack of studies evaluating the intricate interplay between the microstructural parameters and conductivity properties within these novel alternative eutectic systems. Therefore, this study bridges this gap by investigating hypoeutectic alloy compositions designed through ICME principles to elucidate the relationship between the eutectic phase structures and overarching conductivity performance. This research contributes to advancing the understanding of alloy design principles for alternative eutectic systems.

Failure Analysis of Large Alloy Steel and White Iron Castings (24-023)

White iron and alloy steel mill liner castings as large as 5 tons are typically used in semi-autogenous grinding mills, Autogenous grinding mills, and ball mills to process mineral ores after primary/secondary crushing. A failure is defined as the inability of a manufactured part or an assembly to perform its intended function for any reason during its service life. Case histories will be presented on AG and SAG mill feed end / discharge end head liners, shell liners, and discharge grates that either fractured prematurely or did not perform as designed in service. Failure Analysis is the collection and analyzing of data from all relevant sources and locations to determine the cause of failure and make recommendations to avoid future failures. Details related to the process of metallurgical failure analysis will be discussed along with lessons learned to identify possible ways to avoid future failures.

Daniel DeMiglio and Robert Schrock, ME Global, Minneapolis, MN

Segregation of Cast Medium Mn Steels (24-116)

Quenching and partitioning steels have attained a significant amount of research in the past five years. These steels represent a new alloying and heat treatment strategy. These alloys have the potential to provide new market opportunities for steel castings. Many researchers include a homogenization step in the heat treatment to reduce the effect of segregation. However, little data has been presented in the open literature showing such segregation. The work in this paper examines macro and micro segregation in a Y-block casting. Spectrometry of the casting and SEM/EDS analysis were conducted to characterize the amount of segregation and determine the need for a homogenizing heat treatment. Little segregation was found which indicates a homogenizing step is unnecessary in the size range of Y-block used.

Intro to Supervisor Development: An Overview (Part 1) (24-136)

Jim White, Consultant, Green Valley, AZ

The Institute’s newest 2-day course will be presented in an overview. Designed to assist new supervisors acquire the knowledge and skills required to be an effective leader. The course covers a wide range of topics including team leadership, communication, employment issues, and building on your success as a leader. It is especially designed to help those in the metalcasting industry (union and non-union) who are supervising hourly, or salaried workers. Introduction to Supervisor Development is beneficial to those who have been recently promoted from hourly or salaried ranks who have little previous experience in supervision and for supervisors that have not had any formal training.

Additive Manufacturing Division

Room: 202DE – Level 200

Additive Manufacturing Influence and Benefits on Marine Castings (24-151)

Clayton Rasmussen, Mercury Marine, Fond du Lac, WI

Additive manufacturing (AM) has opened countless opportunities for the advancement of the casting industry. Mercury Marine is pushing the boundaries of traditional manufacturing of casting tooling and creation of prototypes through significant investment in applications of AM. Mercury Marine creates castings using a variety of methods including High Pressure Die Cast, Lost Foam, Gravity Pour, and Investment, each with specific benefits enabled by AM. Engineers can exercise their in-house additive capabilities and outside partnerships to increase their influence on casting quality, schedule attainment, and maintenance mitigation. Powder Bed, Wire Arc, Sand, and FDM will be showcased to exemplify AMs disruption of the casting environment, and its benefits to the entire casting industry.

3D Sand Printing Adoption in A Production Environment (24-152)

Kyle Peterson, Grede Iron Mountain, Kingsford, MI

Grede Foundry will share some of their experiences in evaluating, both technically and from business ROI perspective, 3D sand printing technology in their production foundry over the past 8 years. Since then, Grede has expanded with additional sand printers and have integrated for the applications in automotive, high-volume, high-performance iron casting production.

Molten Metal Processing of Copper Casting Alloys for Improved Mechanical Properties (24-169)

Carl Soderhjelm and Diran Apelian, ACRC, University of California, Irvine, CA; Timothy Strelitz and Peter Sinsheimer, California Metal-X, Los Angeles, CA

The quality of the molten metal is crucial for high integrity and quality castings. In steelmaking the treatment of the molten steel through vacuum degassing methods has yielded significant improvements in the resultant product’s properties. In aluminum, the processing of the molten metal to reduce hydrogen levels via degassing as well as inclusion removal via filters has enabled the industry to produce high integrity components. In both ferrous and nonferrous metals, molten metal processing has shown to be impactful in the resultant cast products. In this presentation, the focus is on molten metal processing of copper alloys. Specifically, the results show improvements in UTS and elongation values in alloys such as C87850 and C96400, as well as in other copper-based alloys. The work will be presented, reviewed, and discussed.

Data-Driven Design Properties for Cast Carbon Steels (24-020)

Steel Founders’ Society of America (SFSA) has collected the ordinary testing results for commercial carbon steel heats from a variety of producers, in order to develop an extensive data set of properties. This data set has been analyzed and is compared to steel mill properties, specifications, and allowable design values, which are embedded in American Institute of Steel Construction- Specification for Structural Steel Buildings (AISC-ASD), and the ASME Boiler and Pressure Vessel Code (ASME BPVC). This analysis demonstrates the capability of carbon steel castings to provide safe and reliable service that is compatible with steel mill products in fabrications or other structures. Statistically supported values for tensile properties for steel castings are reported and compared with other steel products.

Embracing Adversity – Mining the Riches from Life’s Challenges (24-124)

Mike Lenahan, Badger Mining Corp., Berlin, WI

Life is unpredictable and often presents significant challenges and hardships. These challenges and hardships do not determine our ultimate destination, but rather give us an opportunity to grow and find new meaning. Adversity often allows us to expand our vision, renew and restore our appreciation, and develop new skill sets to thrive.

Mike Lenahan is Executive Vice President - Industrial Sales at Badger Mining Corporation. A graduate of Bowling Green State and Notre Dame, Lenahan started his career at Sand Products of Cleveland in 1987. He has since become an expert on foundry sands and foundry recycling, having authored multiple papers on both topics. Lenahan is a Past President of AFS. He has been an active member of several AFS chapters and is a past chair of the EHS Division and Government Affairs Division. Lenahan also has served on the board of the Ohio Cast Metals Association and as secretary-treasurer of the Foundry Association of Michigan.

Surface Finish (24-040)

Mark White, Impro Industries, Palm City, CA

Surface finish requirements are usually implied in discussions and referenced as an RMS or Ra value. Little discussion occurs about the functional reason for the finish unless it is an airflow requirement in a turbine engine casting. This paper is offered to the AFS Metal Casting Congress-2024 as a service to both sides of this topic- casting purchaser and casting manufacturer. The paper discusses surface technology, surface finish attainment, and surface finish inspection with an added section about problems in additive manufacturing relative to surface roughness and inspection. The author’s hope in offering this work at Metalcasting Congress 2024 is that the audience gains valuable information to go on and successfully handle this topic in their own companies where the situation is turned from “production stopping” to smooth production.

2023 Casting of the Year: Tooling & Equipment International (24-174)

*Oliver Johnson, Tooling & Equipment International,
Livonia, Michigan, USA*

There's a lot riding on the 2023 Casting of the Year — literally. Join us as we showcase the Cadillac Celestiq's rear rail underbody, a remarkable casting created by Tooling & Equipment International (Livonia, MI). Two rear rails are among a total of six giant castings, which, when connected, make up the car's entire underbody. A completely clean-sheet design with no predecessor, the 59.5-lb. casting measures in at 58.5 x 22.5 x 33.3 inches. It was made with TEI's own proprietary sand cast alloy developed for high ductility (bendability), an essential property for the automotive industry. Be inspired by the possibilities and advancements in the field of metalcasting as we celebrate this outstanding achievement and worthy winner of last year's Casting of the Year competition.

versity of Technology, Isfahan; Roger Scherer, Plastics
Engineering Technology, Wisconsin Rapids, WI*

This paper presents/reviews recent research on the development of high-performance aluminum matrix composites (MMCs) incorporating Graphene NanoPlatelets (GNPs) into cast aluminum alloys. This paper discusses using including stir casting, squeeze casting, pressure infiltration, and Covetics processing. The effects of Graphene on the mechanical behavior and microstructural evolutions of Graphene reinforced aluminum alloy matrix composites (GMMCs) during solidification are discussed. The challenges of formation of agglomerates of graphene, porosity, aluminum carbide and segregation of graphene during solidification, and possible strategies of overcoming these issues are discussed. The potential of Covetic Processing (where electrical fields are applied to the melts) to form aluminum-carbon-graphene alloys with ultra-high mechanical and physical properties are presented.

Solidification Processing of Reduced Graphene Oxide Dispersed Aluminum Nanocomposites by Squeeze Casting Techniques (24-080)

This paper is on synthesis and processing of Al- reduced Graphene Oxide (rGO) composites utilizing the squeeze casting technique. The conversion of graphite to rGO through Hummers method and different weight percentage of rGO were incorporated into Al356 alloy matrix to optimize properties and process-ability. Combined compocasting and squeeze casting, a hybrid method was employed to disperse reduced Graphene oxide uniformly within alloy matrix by applying both mechanical stirring for dispersion and squeeze pressure for more rapid and pore free solidification. This technique resulted in a homogenous distribution of rGO with good interface with the matrix. The squeeze cast Al 356-0.3%rGO composites exhibited tensile strength of 340 MPa, hardness was 130 BHN, coupled with a low coefficient of thermal expansion (CTE) of $10.83 \times 10^{-6} / ^\circ\text{C}$ @RT-50°C, and it also significantly enhanced tribological perfor-mance. These results suggest potential applications of these composites in high performance industrial, automotive, and aerospace sectors.

Gravity and Semisolid Casting of Self-Healing Aluminum Matrix Composites (24-055)

The current research focuses on casting self-healing metal matrix composites with aluminum alloy as a matrix, and Nitinol fiber as reinforcement. The shape memory effect of Nitinol fibers can cause them to shrink and narrow the crack in cast matrix material. Self-healing metal matrix composite samples were cast using gravity die casting, and semi solid casting after rapid slurry formation (RSF). Casting procedures, microstructures, and mechanical properties are reported. The cast aluminium-Nitinol fiber composite samples prepared by both techniques were cracked under load; both types of samples exhibit a reduction in the width of the crack in the samples upon heating the sample above the transformation temperature of Nitinol. Under certain conditions, the cracks in cast alloys reinforced with Nitinol have been completely sealed leading to self-healing.

Observational Study for Developing a Predictive Regression Model for Ultimate Tensile Strength of Gray Iron Class 25A (24-034)

The ASME Boiler Pressure Vessel Code Section IV, Article 2, requires that each individual tensile strength test of a cast test bar be equal or above 25,000 psi (ASTM A48/A48M-03, class 25A) in order to approve the castings lot. The results of the analyses of this observational study led to the conclusion that it’s pos-sible to predict, with a high confidence level ($\geq 99.0\%$), the ultimate tensile strength of a new individual observation. The observational study consists of an exploratory data analysis of one-year (2011) mechanical and chemical tests taken during production of heat-exchanger castings. A more adequate regression model is selected from several iterations. The implementation and validation of the model led to establish an effective process control of Carbon Equivalent, which made possible to achieve 100% tensile strength com-pliance of individual tests in 2012 and more than 99.75% in the following years.

Carlos Crespo, C6σBB, ASQ CMQ/OE, Granger, IN

Section Sensitivity of Mechanical Properties in Pearlitic Spheroidal Graphite Iron Castings with Heavy Section (24-041)

The causes of section sensitivity on tensile and impact properties in pearlitic spheroidal graphite iron castings were investigated using sand-molded samples with modulus (M) from 1.25 to 5 cm. It was found that the most influential factor on the section sensitivity of tensile properties was the microstructure of reticulated ferrite precipitated along the prior austenite grain boundaries. This reticulated ferrite precipitat-ed at M over 3 cm. For impact properties, the precipitation of the reticulated ferrite and the increase in the spacing of the pearlite layers tended to decrease the absorbed energy in the transition region. These section sensitivity on tensile and impact properties were improved by normalizing.

Haruki Itofuji, Adstefan Casting Solution Center, Japan; Satoshi Yamamoto, Daiwa Heavy Industry Co. Ltd., Hiroshima

Effect of Casting Method and Surface on Ductile Iron Machinability (24-102)

Machinability measurements were conducted during face cutting of ferritic/pearlitic ductile irons, produced by the continuous casting process (8” diameter cylindrical bars), and by sand mold castings (10” diameter, 5J-AFS discs). These two processes provided significantly different cast surface topology, near-surface microstructure (so-called “casting skin”) and graphite nodule count in the casting body. Cut-ting forces and tool wear were measured for different machining parameters. The continuous cast ductile iron provided better surface machinability because, in this case, the casting skin had less adverse effect on tool wear and cutting energy than in the case of the sand castings. However, sand castings showed better machinability of the casting body because they had a finer graphite structure. Quantitative microstructure analysis was used to correlate graphite structure in ductile iron to chip formation. These tests provide data that can be used for machining process planning.

Iron & Steel Castings and Core Production Results from Finer Grades of Chromite Sand in Shell Applications (24-033)

Chromite Sands have been utilized to produce cores in foundries for many years. This investigation focuses on finer grades of chromite sand for core produced with shell technology. The specific shell cores produced result from the unique thermal characteristics of finer grades of chromite sand. The resulting castings demonstrate a high level of casting integrity.

Judging the Effect of Penetration and Mil Thickness on Core Wash Performance in PUNB Steel Applications (24-045)

This study investigated the relationship between mil thickness, penetration, and core wash performance in a high temperature, no-bake molding application with steel. It was found that the depth of wash pene-tration strongly correlates to the performance of the core wash. With a single coat of wash, mil thickness was proved to be inversely proportional to penetration and was found to correlate negatively to wash performance. A statistical discovery was made that wash penetration is a significant driving factor of wash performance when a single coat is applied. This research statistically defines how penetration and mil thickness are related to each other and how they affect wash performance. Findings made in this study may be utilized to eliminate the need for multiple coats of wash and to better determine the ideal wash baumé or specific weight for different wash compositions.

Panel: Networking 101 – Building & Maintaining (24-142)

Are you making good networking connections in the industry? How are you networking with different personalities? How do you overcome that sometimes “uncomfortable” feeling when needing to network? What are some motivations for networking? Come join some of the best networking people in the metalcasting industry to learn how they make it all happen! Learn some tips and tricks you can utilize to network, grow your network and keep it going.

Earl Miller, Hiler Industries, LaPorte, IN; Brad Muller, Charlotte Pipe & Foundry Co., Charlotte, NC; Stephanie Salmon, AFS Washington Office, Washington DC; Michael Halsband, Sinto America, Grand Ledge, MI

How to Network:

- Elevator Pitches
- What is your motivation to network?
- How do you maintain networking connections for the long-term?
- How do you network with different personalities?
- How has networking improved your role in the industry?
- What are your tips and tricks that you utilize to network that are easy?

Workforce Development in Metalworking and Defense Manufacturing

Matt Draper will be discussing the METAL program, a national workforce initiative funded by the DoD’s IBAS Program and in partnership with IACMI. This initiative, dedicated to the casting, forging, and plate rolling industries, aims to create a training network to meet workforce needs through 2050. Draper will highlight METAL’s mission to empower the next generation of innovators and builders in these sectors. He’ll also address the critical need to respond to the shrinking supply chain for defense materials by rebuilding

Investigation of Heat Treatment on Silicon Carbide Composite Compared with Silicon Nitride Composite for Reinforced Aluminum Matrix (24-057)

The purpose of this study is to determine the additional effect of heat treatment on the hardness, corrosion resistance, and mechanical strength of cast aluminum matrix composites reinforced with SiC. Additionally, this study investigated the strength and hardness of both silicon carbide (SiC) and silicon nitride (Si3N4) reinforced aluminum composites and compared with previous research conducted in the lab, where only silicon carbide was added. Silicon nitrides are a group of advanced engineering ceramics with high strength, fracture toughness, hardness, wear resistance and good chemical and thermal stability.

In-situ Solidification Processing and Characterization of A535 Al-alloy Metal Matrix Composites Containing SiOC Particles (24-078)

The present study explores the feasibility of incorporating poly(methylhydrosiloxane) (PHMS) into A535 Al-alloy melts via polymer injection pyrolysis approach to synthesize in-situ ceramic particles. 2wt% of cross-linked solid PHMS was added to A535 melts by stir and ultrasonic mixing and cast into preheated (200oC) cylindrical steel molds. Microstructural analysis revealed α-Al grains, Al-Mg intermetallics and ceramic particles segregated mainly along the grain boundaries after solidification. Grain size decreases from 140µm to 60µm because of the addition of polymer to the melt. Also, XRD study indicates the presence of SiO2, SiC and Al3C4 phases. Mechanical testing showed that Vicker’s microhardness and yield strength increased from 76HV to 87HV, and from 95MPa to 129MPa, respectively because of addition of polymer to the melt. Improvement in mechanical properties is mainly attributed to reduction in grain size and presence of hard ceramic particles formed as result of addition of polymer which pyrolyzed.

Industry 4.0 Adoption Using AI/ML Driven Metamodels for the High-performance Ductile Iron Sand Castings Design and Manufacturing (24-114)

Data-centric near real-time intelligent process control for smart manufacturing in an Industry 4.0 era is of tremendous value. Design and manufacturing of high-performance ductile iron sand castings is a multi-variant complex process with many uncertainties involved. As a result, despite a well-controlled operation and an experienced workforce, iron foundries in a production environment do face sporadic shrinkage and lots with nonconforming properties requirements, resulting in scrap or rework. A framework and methodology consisting of AI (Artificial Intelligence) and ML (Machine Learning) tools, coupled with ICME (Integrated Computational Materials Engineering) and process simulation tools will be presented to quantify uncertainty (UQ) Metamodels, both predictive and prescriptive in near real time are developed using such AI/ML techniques using production historical and selective DOE generated additional data. The proposed framework and approach is applicable to solve such complex problems with uncertainty in metalcasting design & manufacturing.

2024 Plant Engineering Award: Melting Modernization and Foundry Transformation (24-168)

The Bingham & Taylor Culpeper foundry transformation, undertaken amidst the COVID-19 pandemic, showcases a multi-phase upgrade of mid-20th-century technology to the current state-of-the-art. The project, costing over \$24 million, was executed with a focus on improving employee safety, environmental performance, product quality and consistency, and operational efficiency.

Sahil Makwana and Tarun Jaju, Bingham & Taylor Corp., Rocky Hill, CT

Safety enhancements were marked by a significant reduction in the Total Recordable Incident Rate and in Days Away Restricted Time. The upgrade to Electric Furnaces led to a 92% reduction in confined space entries and a 93% decrease in silica-containing reline material, greatly contributing to compliance with silica standards.

Environmental improvements included a 93% reduction in particulate matter emissions per ton of metal melted and the elimination of various toxic emissions, allowing B&T to move towards Synthetic Minor Status. The foundry generated 52% less sand and slag per month and saw a 26% reduction in waste disposal expenses.

In terms of quality, consistency, and efficiency, the upgrades led to a significant improvement in lbs/labor hour efficiency and a reduction in scrap rate. Electric Melt Furnaces increased annual capacity fourfold, allowing the introduction of a new shift and reducing lead times by 64%, resulting in a 96% on-time delivery rate in 2023 and a 50% reduction in customer complaints. The foundry’s transition from a Cupola to Electric Induction Furnaces was innovative and executed with internal resources, ensuring minimal production disruption.

The transformation was characterized by simultaneous project execution, compliance with regulations, on-time completion without customer delivery interruptions, and an all-company engagement, including advanced and accelerated training, with no injuries reported throughout the project. This comprehensive upgrade signifies a leap in technology and operational capability for Bingham & Taylor.

Cast Metal-Ceramic Lattice Structures for Lightweight Energy Absorbing and/or Penetration Resistant Structures (24-067)

Cast metal-ceramic lattice structures were produced using 3D printed sand molds from a variety of metals (ferrous and non-ferrous) and ceramic/hard metal tiles. The 3D printing technique was binder jetting and both furan and phenolic urethane binders were used in conjunction with silica sand. The lattice structure properties (deformation in compression and penetration resistance) were determined and then models were developed to allow optimization of the structures and to allow designers to develop lattice structures tailored to specific applications. The cast metal-ceramic lattice structures were demonstrated to 1) reduce the weight of a component (since the majority of the structure is open space) while maintaining as good or better penetration resistance and 2) have superior penetration resistance compared to a solid piece of metal.

Upcycling of Low-Quality Aluminum Automotive Scrap – The DNA of Twitch (24-026)

As our consumption of aluminum continues to grow the demand to maximize the use of aluminum scrap grows proportionally. This includes using all aluminum scrap, especially low-quality aluminum scrap. Automotive aluminum scrap from auto shredders dubbed “Twitch” is an amalgamation of aluminum alloys that are traditionally melted and downcycled to a low-value alloy. The Advanced Casting Research Center is working towards upcycling twitch to develop a high-value green aluminum alloy made from 100% twitch utilizing liquid metallurgy methodologies and ICME. Twitch has been collected over a period and from the two coasts of the USA – geographical and temporal perspectives. An analysis of Twitch as is collected and the metallurgical pathways to upcycle to high-value Al alloys is presented and discussed.

Comparing Hot Friability Test Data to Results from a Green Sand Erosion Casting Trial (24-060)

The greatest proportion of sand/metal defects occurs with the green sand process. Sand in the foundry industry no longer means just silica and specialty sands. Today, there are several other materials both natural and synthetic that are candidates for replacing silica sand. This paper addresses green sand erosion issues for iron castings. Green sand erosion can occur when molten alloy dislodges grains of sand, resulting in a rough as-cast finish. A casting trial developed at WMU was used to evaluate erosion on multiple green sand specimens simultaneously. A gray cast iron recipe was delivered from a controlled head pressure and temperature to achieve a turbulent flow across green sand specimens prior to solidification of the casting. The hot friability test data were evaluated along with results of iron casting trials. Results show that there are surface differences among the green sand systems studied.

Thermal Distortion Testing at Ferrous Superheat Temperatures (24-062)

Thermal distortion testing is an American Foundry Society (AFS) standardized test for chemically bonded sands. The device can accommodate an AFS standard 50 mm disc-shaped specimen that is 8 mm thick. The specimen is automatically brought into direct symmetrical contact with a hot surface. The machine applies a ramping force to the specimen which represents a hydrostatic head pressure experienced by a core and mold wall during filling with cast alloys. Further, the machine maintains a constant force signifying filled mold through casting solidification. During this time the instrumentation is designed to

*Sam Ramrattan, Robert Makin, Zachary Tay, and Shantanu Phalke, Western Michigan University,
Kalamazoo, MI*

capture temperature from the specimen both longitudinal (axial) and radial movement in the specimen. Until now the maximum test temperature was 1000°C (1832°F) which underestimates a ferrous superheat temperature. In this study results show interesting graphical representations of the amplified thermal-mechanical distortions in various polyurethane cold-box sand systems at cast iron and steel interfacial super-heat temperatures.

From the Publication: Equipping Engineering to be Effective (24-157)

Ted Schorn, Enkei America Inc., Columbus, IN

Foundries utilize process and/or quality engineers often with vague descriptions of their role. Sometimes they see their job as simply, “keeping things running smooth” or “making things better.” This can mean a very incomplete understanding of what is needed and overlap and confusion as to how the engineers relate to other support resources. In “Process Control for Engineers”, Schorn first takes up the important task of sorting out what process and quality engineers ought to be doing and how they should relate to one another and the rest of the organization. Grasping these roles with clarity permits both accountability and competence development.

Testing Methods for Characterization of Additively Manufactured Investment Casting Tooling (24-147)

*Nicholas Costleigh, University of Northern Iowa,
Waterloo, IA*

Additive manufacturing of photopolymer resins is emerging as a method to produce intricate expendable patterns with high dimensional accuracy. Material characterization is the first step in perfecting the usage of this method. This presentation will delve into testing methodologies the University of Northern Iowa uses to characterize these materials. Particularly, measurements that describe the compatibility of a material for shelling and burnout processes will be covered. The data collected can be used to support simulation software material information to create more representative simulations of the investment casting process.

Understanding the Factors Driving the Force Exerted on an Investment Casting Shell by Thermal Expansion of a Printed Pattern (24-144)

Tom Mueller, Mueller AMS, New Berlin, WI

The leading cause of failure when casting printed investment casting patterns is the cracking of the ceramic shell due to thermal expansion of the pattern during autoclave de-wax. Shell cracking can largely be avoided through the use of hollow build styles, careful selection of pattern material, and venting of the shell. However, the process changes required to avoid shell cracking add both cost and time to the casting process as well as making it virtually impossible to automate to the level that has been achieved for molded wax patterns. Consequently, printed patterns are used, with few exceptions, only for prototypes and very low volume production. In this study, the factors contributing to the force are identified and an expression is developed to predict the force on the shell as a function of temperature. The expression is used to determine the sensitivity of the exerted force to each primary factor.

Preliminary Evaluation of a Low Cost, Austenitic, Ductile Iron (24-081)

Alan Druschitz and Victoria Rambo, Virginia Tech, Blacksburg, VA; Josh Adelmann, SSAB, Saraland, AL

An austenitic ductile iron that does not contain nickel would be a significant achievement since it would reduce cost by eliminating the use of expensive alloying elements. A preliminary evaluation of ductile irons alloyed with 7.5-12 wt% manganese, 1.8-2.0 wt% aluminum, 2.7-2.8 wt% Si, and no nickel has been completed. X-ray diffraction indicated that the microstructures of these ductile irons are predominantly austenite with a small amount (<7%) of martensite/ferrite. The higher manganese ductile iron hardened slightly when heat treated and the lower manganese ductile iron softened significantly when heat treated. Additional chemistries will be investigated.

2024 AFS Talent Development & Retention Summit

June 19 - 20 | AFS Headquarters
Schaumburg, IL

Talent development and retention is crucial to the success of foundries. In fact, AFS Quarterly Surveys document that overcoming the talent shortage is the greatest challenge facing our industry.

Now is the time for your company and our industry to come together for solutions!

Join other metalcasting HR directors, front-line managers, and expert presenters for the AFS Talent Development & Retention Summit on June 20, 2024, in Schaumburg, IL. As an attendee, you will gain the following benefits:

- Strengthen your ability to plan for succession in your company and to retain employees.
- Gain insight from a foundry industry veteran about supervisor development training principles.
- Bolster your understanding of live shooter prevention and response best practices from a nationally recognized expert. What you learn could save lives!

Receive a briefing on where the foundry industry has been, where it is today, and where it is headed.

Participate in a discussion about worker attraction and retention best practices.

Register today by scanning qr code or by visiting:

Using Computer Simulation to Determine Core Plane Flatness in Disc Brake Rotors (24-021)

Alan Crawford, Waupaca Foundry, Waupaca, WI

Discussion will investigate the feasibility of using the stress simulation module computer simulation to look at core plane flatness in a disc brake rotor. Core plane flatness is a measurement taken to determine how flat the inside plates of a disc brake rotor are compared to the midplane locator between the plates, with the intent of having this measurement be as flat as possible to eliminate balance problems. This is directly influenced by the strength of the core and any movement generated during the filling and solidification stages of making the casting.

Producing Castings with Nano Reinforcements-Challenges and Opportunities (24-105)

David Weiss, Vision Materials, Manitowoc, WI

Nano reinforcement of aluminum casting alloys can offer a significant property improvement to the base material, including high-static and dynamic strengths and improved castability. From a practical standpoint, the successful manufacture of MMNC's rely on three important technical achievements: 1) Getting the particles into the melt; 2) Dispersing the particles within the melt; and 3) Even dispersion of particles into the solidifying casting. The specific objectives of this project were to develop more effective ways to deliver particles into the melt and to insure their even dispersion. While not all of the techniques attempted were successful, significant progress was made with some of them, resulting in the production of a number of sample castings that demonstrated higher mechanical properties and importantly, the ability to easily cast strong, difficult to cast materials that had challenging geometries.

Introduction of New AMC Investment Casting Project Objectives, Deliverables and Timeline (24-148)

*Jiten Shah, Product Development & Analysis LLC,
Naperville, IL*

In November 2023, a 5-year American Metalcasting Consortium (AMC) research project focused on critical portions of the investment casting process commenced. The project has three primary tentacles with goals to improve recycling of alumino-silica (and other) shell materials, evaluate new materials and processes for more rapid shell production, and the generation of an improved tool for risering those less common alloy and shell material combinations, where trusted feeding information is less available. This presentation will introduce the project team with members from AFS, PDA LLC, UNI, California State Polytechnic University, Pomona, and industrial partners while laying out the project timeline and advising on how to get involved. This AFS-led project is funded as part of AMC's Emergent Metal Casting Solutions (EMCS) program sponsored by the Defense Logistics Agency Troop Support, Philadelphia, PA and the Defense Logistics Agency Research & Development (R&D) Office, Ft. Belvoir, VA.

Online Sand Tester for Smart Foundries

Sand Tester QualiMaster AT1

- Performs six tests: compactability, shear strength, gas permeability, springback, formability, and temperature
- Takes three samples in 40 seconds
- Compactability and shear correction
- Web interface and data collection
- Universal communication protocol (OPC UA)
- Can be added to any sand system
- Built foundry tough

**“The flexibility and quality
 is one reason
 we keep coming back.”**

Pictured Is:
 Dave Gross, Core Room Supervisor

“We purchased our first piece of Tinker Omega equipment in 2012. We have since upgraded our molding line, sand system and core room.

Tinker Omega’s dependability and willingness to customize their equipment and controls to fit our needs has resulted in significant uptime and efficiency improvements.

Our more recent purchase is our core blower that allows us to blow sand mixes from all three of our mixers, each utilizing a different resin system.

The flexibility and quality is one reason we keep coming back.”

Henry Winter
 President, Northern Stainless

NEENAH **NF** Industrial Solutions
 F O U N D R Y

With 150 years of experience, Neenah Foundry Industrial Solutions Group, part of Neenah Enterprises, Inc. (NEI), has consistently maintained our industry leadership, delivering value added casting solutions for our customers in the agricultural, construction, HVAC, material handling, and Industrial markets. Now a wholly owned company of Charlotte Pipe and Foundry, NEI is focused on building on our strong foundry know how; how can Neenah Foundry Industrial Solutions Group help you with your casting requirements?

AW Bell Machinery*	242
145 Abbotts Rd.	
Dandenong South, Victoria 3175	
Australia	
bellmachinery.com	
+61 3 9799 9555	

AW Bell Machinery, Foundry Equipment Specialist.

From robotic dipping and pouring equipment to a full range of aftercast manual and automatic equipment (cut off, grinding, waterblast), our aim is to make production more efficient and safer. Our range of equipment can be customised to tackle castings of any size and complexity. We can integrate to existing processes or develop a complete automation cell solution.

With over 40 years of experience in designing equipment specifically for foundries, we pride ourselves on delivering a solution that is right for your business.

ABP Induction LLC*	219
1460 Livingston Ave. Bldg. 200	
North Brunswick, NJ 08902-1873	
abpinduction.com	
(732) 932-6400	

ABP is a leading supplier of induction furnaces and heating systems for the metals and metalworking industries. With design, production, assembly and aftermarket services for foundries, forging and steel plants, we are experts in melting, pouring, holding and heating of iron, steel and nonferrous metals.

Abrasive Technology*	723

DESIGN. VERIFY. OPTIMIZE.

NEW! Version 9.0

From Unrigged Casting to Fully Rigged Model

CFD Analysis and Shrinkage Prediction

finite
solutions
Inc orporated

Visit us at **Booth #809**

SOLIDCast is the **ONLY** system that **INCLUDES BOTH** Gating and Riser Design Wizards, so that simulation actually **HELPS** you to design an effective rigging system, not just test one! Special calculations are included for rigging gray and ductile iron castings, taking advantage of graphite expansion.

SOLIDCast is the **ONLY** system that simultaneously calculates both thermal and volumetric changes during solidification, producing the most accurate shrinkage analysis available.

SOLIDCast is the **ONLY** system that runs full simulations in minutes on readily-available standard PCs. Multiple analyses can be run simultaneously using off-the-shelf multi-core machines.

SOLID9CAST FLOW9CAST

THE PRACTICAL SIMULATION SOLUTION

(800) 547-1527

203

Ajax TOCCO Magnethermic Corporation is a world leader in induction melting and heating applications in the metals industries. Our proven applications include a complete line of coreless and channel furnaces for all ferrous and nonferrous melting or holding applications. From simple melt and pour systems to sophisticated computer-controlled melt shops, Ajax TOCCO's line of equipment covers induction melting equipment of all sizes and frequencies.

Keep your equipment running & optimize productivity. Trust Ajax TOCCO to provide the equipment, services, and parts you need for your application.

Albarrie Environmental Services Ltd.*
85 Morrow Rd.
Barrie, Ontario L4N 3V7
albarrie.com/products/categories/industrial-air-filtration/
(866) 269-8275

613

Albarrie is the ultimate solution for all your filter bag needs. We are the industry leader in manufacturing high-quality particulate filter bags and providing maintenance services for all dust collector systems. Our filter bags are specifically designed to capture and retain dust particles ensuring compliance with regulatory standards. With our comprehensive range of products and services, we are dedicated to meeting the diverse needs of our valued customers. Choose Albarrie for the best filter bag solutions and experience the difference.

Allied Mineral Products Inc.*
2700 Scioto Pkwy.

(614) 790-3333

428

ASK Chemicals Group, headquartered in Hilden near Düsseldorf (Germany), is a global supplier of high-performance industrial resins and foundry materials. The company's products are mainly used in foundries and in the production of abrasives, refractories, impregnation, coatings, insulation and composite materials.

ATD Engineering & Machine*
533 N. Court St.
Au Gres, MI 48703
atdemllc.com
(989) 876-7161

409

At ATD, we design, test, and build highly engineered custom equipment and automation for a multitude of industries which include foundry, automotive, agriculture, transportation, marine, and machining facilities. Our team of highly trained engineers and toolmakers also includes metal casting industry veterans with an extensive knowledge of core making, molding, melting, and finishing. This extensive knowledge, along with our innovative solutions, provides our customers with an optimal solution for their production facility.

B
B&L Information Systems Inc.*
4707 Rambo Rd.
Bridgman, MI 49106-9723
blinfo.com
(269) 465-6207

511

B&L Information Systems is the global leader in cloud-based Enterprise Resource Planning (ERP) software for foundries, die casters and investment casters. Since 1976, B&L has implemented their unique ERP solutions at over 500 metalcasting operations, making their cloud-based Odyssey ERP match how metalcasters operate. With Odyssey, metalcasters maximize their resources, minimize costs, and make better decisions faster.

Badger Mining Corp.*
409 S. Church St.
Berlin, WI 54923-2114
badgerminingcorp.com
(920) 361-2388

235

Badger Mining Corporation is a family-owned industrial sand producer operating multiple mining and distribution facilities throughout North America. Our customer focus is evident in the high-quality products and services we provide each day. We value people (ours and yours), the planet and their collective prosperity.

6682 W. Greenfield Ave.
West Allis, WI 53214-4960
bct-us.com
(262) 785-7577

202

Located in the historic Allis Chalmers manufacturing plant in West Allis, WI, the 150,000-square-foot renovated BCT facility combines an amazing manufacturing history with the space and capacity to design, build and fully test even the largest blast systems. At BCT, we develop innovative products to support all industries. We have the largest engineering and technical sales, support and service teams in the industry and an ongoing desire to make a difference with our customers. This is all part of our investment and commitment to support and meet our customer demands right here in the USA.

Bondtech Corporation*
100 Valley Oak Dr.
Somerset, KY 42503
bondtech.com/autoclaves/core-leaching-autoclave/
(606) 677-2616

743

Bondtech Corporation doesn't just sell machinery, we custom manufacture to specification, rebuild existing machinery, and service all brands of equipment, even our competitors. The Bondtech Core Leaching and removal system is a self-contained high pressure, high temperature capable caustic autoclave system, utilized in the removal of ceramic inserts from high nickel alloy investment castings. Each system is custom designed for the application and the product processed.

Bronco Blast Equipment
2124 Corporate Dr.
Waukesha, WI 53189
BroncoBlast.com
(262) 544-4211

213

For over 40 years, Bronco has been the trusted name in heavy-duty blast cleaning equipment. From our tumble blasts, UDD blast wheels, pass-thru machines and table blast machines to our extensive inventory of Bronco replacement parts. Our reputation is built on our technical expertise, innovation, and industry experience.

Since 1981, Bronco has been built to outperform, even in the most demanding environments. Our commitment from day one is to manufacture long-lasting, heavy-duty blast equipment that is tough enough to earn the Bronco name.

Standard Aromatic

Sigmasure

The Industry Standard System. Using aromatic solvents offers a high level of strength and is characterized by general robustness. The solvents used are widely available worldwide.

Biodiesel

Biocure

The high reactivity of the Biocure series enables a reduction in amine consumption, thus providing additional relief for the environment and employees while maintaining high levels of strength and robustness.

TEOS System

Silcure

The reduced organic content significantly lowers emissions. Employees' exposure to smoke and odor decreases. At the same time, the reduced gas volume during casting minimizes the risk of different types of defects

CADDIS Systems*

3225 Zimmerman Dr.
Bettendorf, IA 52722
caddissystems.com
(563) 551-6418

Caddis Systems is a leader in capturing machine data, delivering real-time insights, and enabling manufacturers to drive tangible efficiency, maintenance, and performance improvements. Caddis can be installed in minutes onto a light stack or connected directly to the machine through a non-invasive signal on the machine that is a true indicator of the machine running and cycling.

California Metal-X*

366 E. 58th St.
Los Angeles, CA 90011-5318
cmxmetals.com
(323) 234-9281

CMX was founded in 1979. They developed mechanical ingot for c844 and c836 alloys, allowing their business to thrive and grow. CMX was the first manufacturer of copper-based alloys to eliminate lead use in 98% of alloys they produce. As a company who thrives on creativity and curiosity, CMX's latest achievement is a novel system for efficiently and effectively removing oxygen, hydrogen, oxides and dirt in the manufacturing process. The elimination of these forms of contamination allow CMX to manufacture copper alloys of the highest quality and mechanical properties at competitive prices.

Capital Refractories Inc.*

1548 Mims Ave. SW
Birmingham, AL 35211-3734
capital-refractories.com
(205) 443-7963

Capital manufactures, supplies and installs refractory materials and offers a range of products and services globally.

CARBO*

5050 Westway Park Blvd. Ste. 150
Houston, TX 77041
carboceramics.com
(281) 921-6400

CARBO offers a versatile line of casting media products to fit your applications, including our featured high-performance ceramic casting media that eliminates casting defects while complying with OSHA PEL limits.

Carpenter Brothers Inc.*

7100 W. Donges Bay Rd.
Mequon, WI 53092-4448
carpenterbrothersinc.com
(414) 354-6555

Proudly serving the metal casting industry since 1917. Your one stop shop for consumable supplies, equipment, and technical expertise for your metal casting needs!

Carrier Vibrating Equipment Inc.*

3400 Fern Valley Rd
Louisville, KY 40213
carriervibrating.com
(502) 969-3171

All Carrier Vibrating Equipment machinery is custom designed to meet customer requirements. From initial design to performance testing in our state-of-the-art test lab to final installation, you can rely on Carrier to solve your processing issues.

Our Products

- Chipping Hammer Steel
- Pavement Breaker Steel
- Rivet Buster Steel
- Zip Gun Steel
- Scaling Bits
- Electric Hammer Bits
- Demolition Bits
- Air Tools & Accessories
- Air Tool Repair

Many of the above bits are standard across the industry. In addition to our standard offering, Champion develops and designs customer specific tools for special applications. Champion Chisel Works, Inc. is a family owned business manufacturing products in Rock Falls, Illinois, and distributing out of multiple warehouses across the United States.

Chesapeake Specialty Products Inc.*

5055 North Point Blvd.
Baltimore, MD 21219
chesprod.com
(410) 388-5055

SphereOX is the ultimate solution for foundries, providing the highest-quality spherical foundry sand additive on the market. This synthetic engineered sand additive is consistently purer than other sand additives or natural oxides, making it the clear choice for foundries looking to improve their bottom line. By incorporating SphereOX as an additive in foundry cores and molds, surface defects are significantly reduced, and the quality of the castings is dramatically improved. Its superior flow properties require less resin to achieve the required mold core bond strength, reducing overall cost.

Clansman Dynamics USA*

(262) 691-3100

DustMASTER offers a performance proven solution for process-ing very difficult-to-handle waste streams—from cupola dust and foundry sand to shot blast. The DustMASTER process converts these materials into a uniform, non-dusting product that can be easily recycled, transported, and disposed of economically. Dust-MASTER also offers three (3) different style mixers for dry and low moisture castable refractory materials. Our Prashak hori-zontal shaft paddle mixer has been the mainstay in the refractory industry for the last 50 years. The Turbin pan style and Planetary mixers are also available.

Elemental Metals*
11 Phyllis Pl.
Randolph, NJ 07869
elmetals.com
(973) 945-6723

Elemental Metals is a supplier of high purity elemental raw materials, alloys, oxides and specialty chemicals to the aerospace, medical, electronics, jewelry and alternative/renewable energy markets. They are able to offer a few grams of material for research scientists to truckload quantities for high volume production. In addition to commercially available materials, Elemental Metals also offers specialty alloys and made-to-order R&D custom alloys in various forms (including atomized powders) through their partnerships with several melt facilities.

Elkem Silicon Products*
PO Box 266
Pittsburgh, PA 15230-0266
elkem.com
(412) 299-7200

Elkem offers a complete line of high-performance foundry nodulizers, inoculants, preconditioners, cover alloys, and ferrosilicon in the grades and sizes needed to produce gray-, ductile-, and CG-iron castings. Each Elkem alloy meets high quality standards during production operations worldwide. These specialty products offer many foundry benefits, including their ability to control graphite shape and size, influence the ferrite/pearlite matrix ratio, eliminate surface chill and internal carbides, minimize porosity from shrinkage, optimize mechanical properties, and increase machinability.

(847) 490-9200

FEF strengthens the metalcasting industry by supporting unique partnerships among students, educators, and industry, helping today's students become tomorrow's leaders by providing scholarship and program support. FEF supports 30+ universities that have an experienced Key Professor who educates students in advanced technical skills and has a working foundry laboratory that excels in teaching metalcasting-based curriculum with oversight and support from the metalcasting industry. FEF provides students with many high-level experiences where they can meet and network with industry professionals.

Ferroglobe **746**
1585 Sparling Rd.
Waterford, OH 45786
ferroglobe.com
(740) 984-2361

Ferroglobe is one of the world's largest vertically integrated producers of Silicon Metal, Ferro Silicon, Calcium Silicon and Manganese Alloys. Supplying commodity and customized specifications globally to a broad range of industries including photovoltaics, chemical silicones, Aluminum, Steel and Cast Iron Foundries. A pioneer in ductile iron treatment processes, potent inoculant compositions complemented by best-in-class continuous cast and rapidly solidified nodularizers.

Finite Solutions Inc.* **809**
4769 Highland Park Dr.
Slinger, WI 53086-9441
finite.solutions
(262) 644-0785

Finite Solutions Inc. develops, sells, and supports SOLIDCast and FLOWCast, the world's first and best-selling PC-based casting simulation software. We also provide contract simulation and rigging design services. New this year is the introduction of version 9.0 of SOLIDCast and version 5.1 of FLOWCast. Both tools are full 64-bit implementations and multi-threaded for the fastest calculations on today's multi-core computers. Process flow from start to finish has been streamlined, making it easier than ever to effectively rig your castings. The PRACTICAL simulation solution.

2024 FOUNDRY INDUSTRY 4.0 CONFERENCE

July 30-31, 2024 | Hyatt Regency | Milwaukee, WI

Industry 4.0 has arrived, and forward-thinking metalcasters are harnessing innovation and technology to enhance productivity, profits, and worker safety while addressing labor challenges. Join us to gain insights into implementing these technologies in your facility and discover how data-driven manufacturing, automation, and workforce training can future-proof your operations for sustained success. Network with industry experts and leave with a tailored action plan to achieve your goals. Plus, don’t miss optional tours of the University of Wisconsin – Milwaukee’s Connected Systems Institute on the evening of 7/31 and Rockwell Automation’s innovative Manufacturing facility, along with an AFS Industry 4.0 Committee Meeting at Rockwell on 8/1. (Transportation not provided for additional events.)

Savelli Technologies S.r.l.* **423**
Via Marrocco 1/3
Rodengo Saiano Brescia 25050
Italy
savelli.it
+3903022795

Savelli Technologies S.r.l., registered trademark “SAVELLI since 1842”, is an Italian company located in Brescia, northern Italy, and a historical Italian supplier of equipment, machines and plants for the “Green Sand” metal-casting industry; it designs and produces automatic tight flask molding lines and sand preparation & return systems; its mission is to facilitate the Foundry process characterized by high complexity, supplying the best machineries and plants 4.0 in the name of technological innovation and environmental sustainability and it designs and customized them around the castings.

Saveway USA Corp. **421**
4305 Mt. Pleasant St. NW Ste. 101
North Canton, OH 44720-5461
savewayusa.com
(610) 376-5440

Saveway is the #1 worldwide leader in Refractory Monitoring Solutions. Among its many benefits, Saveway most importantly provides utmost safety for operating staff and molten-process equipment. Furnace breakthroughs, plant damage and operating disruptions can be avoided. Since relining becomes predictable, maximum service life of the refractory is ensured without any risk.

The Schaefer Group* **845**
1300 Grange Hall Rd.
Dayton, OH 45430
theschaefergroup.com
(937) 253-3342

Frank W. Schaefer, Inc (FWS) started business as a refractory contractor in 1930 and began designing and manufacturing industrial furnaces in 1945. In the early 1970’s, FWS’s aluminum furnace business grew large enough that it became necessary to form two divisions within the company: A Refractory Sales and Service Division and an Industrial Furnace Division. In 1998, the Industrial Furnace Division was separated from FWS, Inc to form a new company, Schaefer Furnaces, Inc (SFI). A combining of these two related companies took place in late 2002, Adding Stack Melting in 2018.

Schust* **252**
4483 County Rd. 19 Ste. A
Auburn, IN 46706
schust.com
(800) 408-4820

Schust provides industrial ventilation systems that purify the air in the workplace. Schust has a flexible approach to project management and understands the challenges that modern industrial environments face. Our in-house specialists and engineering team are dedicated to estimating, designing, fabricating, and installing air pollution control systems that meet the needs of our customers and are both effective and safe.

Scientific Dust Collectors* **740**
4101 W. 126th St.
Alsip, IL 60803-1901
scientificdustcollectors.com/about-us/
(708) 597-7550

For over 40 Years we have continued to manufacture the most efficient Baghouse Dust Collector on the market today. And with your support, we’ll continue for another 40 years. If you have any questions about how we can improve your current dust collection system, or if you are in need of a new Dust Collection System, please keep us mind. SDC will show you how our systems provide an industry leading lower Carbon Footprint, and explain why our Patented UniFlow Supersonic Nozzle® can save you energy and maintenance costs.

“Quality means doing it right when no one is looking.” Henry Ford

SELEE Corporation* **825**
700 Shepherd St.
Hendersonville, NC 28792-6472
selee.com
(828) 697-2411

SELEE pioneered the use of ceramic foam technology in metal filtration 50 years ago. As a result of this commitment to innovation, SELEE remains consistently at the forefront of the latest developments in filtration, melt treatment and transfer processes for molten metals of all types. We are very proud of our long-term commitment to customer service, product quality, leading edge innovation, and technical support for our customers. As pioneers in metal filtration, SELEE continues its legacy of helping customers improve the quality of their products and the efficiency of their operations.

Shells Incorporated **231**
502 Old U.S. Hwy. 30 E.
Bourbon, IN 46504
shelsinc.com
(574) 342-2673

Shells is a leading producer of outsourced cores for the foundry industry. We offer a full-range of core-making services including cold box and shell cores. Shells 3D offers the foundry industry with 3D printed sand cores and molds that are sophisticated and elaborate, in less time. We use a binder jetting technology to produce resilient, no-assembly 3D printed sand cores and molds for the highest quality castings.

Simpson Technologies Corp.*

751 Shoreline Dr.
Aurora, IL 60504-6194
simpsongroup.com
(630) 978-0044

Simpson is a global leader in industrial mixing and foundry sand technology. Our machines improve quality, lower variability and reduce cost. Our technologies include everything you need to create the highest-quality, precision-blended products.

From world-leading intensive mixing technology to specialist solutions for the preparation, reclamation and testing of foundry sand. Robust, durable, and easy to maintain, our technology goes the distance – with virtually no manual intervention. Equipment that is energy-efficient and cost-effective.

Sintex Minerals & Services Inc.*

29810 Southwest Fwy.
Rosenberg, TX 77471
sintexminerals.com
(281) 239-2799

CASTBALL ceramic sand has been designed to produce casting with high quality granting less expansion-defects as veining, metal penetration and burn-on, also providing high dimensional accuracy.

ELECTROTHERM®

*"The most preferred
Steel Plant maker
up to 1 Million Ton / Annum"*

Winning Combination of Steelmaking DRI making-Melting-Refining-Casting-Rolling

Coal Based DRI Plant

Coal based Direct Reduced Iron (DRI) / Sponge iron plant for producing high quality alternative raw material for steel making plants.

Transformers

Transformers for induction furnace, EAF, LRF, rolling mill, power and distribution, solar inverter duty and solar power house, utilized substation and reactor.

Induction Melting Furnace

State-of-the-art Digital inverter technology through Fibre Optic Communication (DiFOC) system in Power Supply Units up to 40,000 KW coupled with ultra-efficient induction melting furnace up to 80 ton capacity.

Ladle Refining Furnace

ERF® (Electrotherm Refining Furnace) with ELdFOS® technology, a special metallurgical equipment for carrying out de-phosphorization and de-sulphurization in the same equipment.

Continuous Casting Machine

High-Speed Billet Casting Machine of different sizes, grades and shapes for Billets, Bloom, Round and Slab and most suitable for Direct Rolling. For making structural steel, alloy steel, spring steel, free cutting steel, bearing steel and pipe grades.

Rolling Mill

Highly advanced Rolling Mill for Bar & Wire-Rod, Structural and Narrow strip Mill with proven European Technology to maximize production, manufactured in India

SPOT+ MM

MELTMASTER APPLICATION PYROMETER

FOR LIQUID METAL TEMPERATURE MEASUREMENT IN FOUNDRY AND TAPPING APPLICATIONS

The smart SPOT+ MM (MeltMaster) application pyrometer provides a single-sensor solution for liquid metal temperature measurements in foundry and tapping applications.

Optimised signal processing and a dedicated application mode allow the SPOT+ MM to accurately measure tapping stream temperatures independent of surface and condition changes during the process.

The SPOT+ MM has millisecond responsivity with integrated time functions to monitor and hold the tapping temperature for a configured time or until the next tapping process starts.

The SPOT+ MM is compatible with the SPOT Actuator for alignment with moving or multiple tapping streams. A further range of accessories, including the industrial enclosure with cooling and air purging options, allow the SPOT+ MM to work in harsh environmental conditions 24/7.

SPOT+ MM Application
Mode Reading

GET THE BENEFITS:

- Autonomous Operation
- Fast Tapping Stream Temperature Measurements
- Plug'n'Play
- Automatic Alignment
- Integrated Video Camera

Proudly exhibiting at:

SPOT+ MM TEMPERATURE RANGE
600 to 1800 °C / 1112 to 3272 °F

A

Aalberts Surface Technologies* 442
12202 Newburgh Rd.
Livonia, MI 48150
aalberts-ht.us
(734) 464-8000

Metal treatment solutions for your most challenging products.

AERO Metals Inc.* 345
1201 E. Lincolnway
La Porte, IN 46350-3955
aerometals.com
(219) 326-1976

Aero Metals is your trusted source for premium precision investment casting services. With decades of experience, we support a range of industries including aerospace, farm & lawn equipment, door & lock security hardware, firearms, hand tools, marine, and more! To ensure the highest quality manufacturing of your parts, our system is certified to the globally recognized ISO 9001:2015 standards. Our team of precision investment casting engineers has extensive experience with complex geometries and hard-to-manufacture parts, offering a truly unique experience custom-fitted to your project.

Alliant Castings* 651
1200 W. 3rd St.
Winona, MN 55987
alliantcastings.com
(507) 452-2932

Alliant Castings manufactures alloyed iron castings. Applying the latest technologies, we produce castings to meet our clients' most demanding specifications. With over 125 years' experience in alloyed iron parts, we take pride in delivering intelligent solutions at a competitive price, with shorter lead times and exceptional customer service.

Atlas Foundry Co. Inc.* 343
601 N Henderson Ave.
Marion, IN 46952-3348
atlasfdry.com
(765) 662-2525

Atlas Foundry is a jobbing and production foundry specializing in Class 25, 30, and 35 Gray Iron Castings weighing less than 50 pounds. We utilize Disamatic Molding Machines to produce molds for our castings. Production volumes range from 100 mold releases to several thousand molds per release. Our foundry is located in Marion, Indiana about 60 miles to the northeast of Indianapolis. Some of the major markets Atlas Foundry serves include trucking, agriculture, construction, pumps, Hydraulic parts, compressors, bearings, stadium seating, marine, and industrial equipment. Since 1893.

B

Badger Alloys Inc.* 643
5120 W. State St.
Milwaukee, WI 53208-2616
badgeralloys.com
(414) 258-8200

"World-class castings delivered" has been our commitment to customers for more than 55 years. Badger Alloys is a family-owned casting manufacturer that pours 200+ alloys on site. Our manufacturing campus includes a pattern facility, machine shop, rapid-response technologies and experienced engineers. We can meet your needs for simple to heavily cored, complex castings, from 10 to 4,000+ pounds. We specialize in creating impellers and other pump parts for the energy, water, chemical, industrial, food/beverage, marine and defense industries. Visit us today at Booth 643!

C

Charlotte Pipe & Foundry Co.* 644
PO Box 35430
Charlotte, NC 28235-5430
charlottecastings.com
(704) 348-5416

Charlotte Pipe is a family owned and privately held company that has been in the foundry business for over 120 years. We currently serve the motor, material handling, fueling systems, packaging, heating and valve/pump markets.

Our new foundry is a large (500,000 sq ft) and modern foundry that has diverse equipment to meet your specific needs. We are a medium to high production green sand foundry, with Disamatics, Sinto matchplate and HWS automated cope and drag molding equipment.

We have in house e-coat, machining and pattern shop. We are a debt free and stable company.

D

Denison Industries Inc.* 545
22 Fielder St.
Denison, TX 75020
denisonindustries.com
(903) 786-6500

Denison Industries is your one-stop shop for premium, aluminum castings! We employ a complete engineering staff that can assist component and casting engineers from design to fit and function to accommodate the end user casting requirements. Denison Industries is located in Denison, Texas in the North Texas Regional Airport. Our facilities total;229,925 sq feet with;10,000 sq feet of office area;100,000 sq feet of warehouse space and a 119,925 sq-foot foundry; We can produce parts sized from 1 lb to 3,000 lbs. Aluminum alloys 206, 319, 354, C355, 356, A356, and E357.

Dotson Iron Castings* **540**
200 W. Rock St.
Mankato, MN 56001-3473
dotson.com
(507) 345-5018

Dotson Iron Castings, an MPS Company is a leading manufacturer of ductile iron castings to various markets, including agriculture, construction, heavy truck, railroad, oil & gas, and industrial. Our capabilities include in-house tooling and machining, painting, heat treatment, and assembly. Dotson supplies the industry shortest lead times, an award-winning engineering, and a dedicated account team. If you are tired of unstable suppliers and inconsistent quality, it's time to come experience the "Dotson Difference".

E
Elyria & Hodge Foundry Group* **440**
120 Filbert St.
Elyria, OH 44035-5355
elyriafoundry.com
(440) 322-4657

Producers of grey and ductile iron castings from 50# to 200,000# in medium to low volumes participating in a wide variety of markets.

F
Ferroloy Inc.* **347**
515 E. 29th St. N
Wichita, KS 67219-4109
ferroloy.com
(477) 876-0897

Full Service Ductile and Gray Iron foundry and machine shop. Specializing in low-medium volume runs.

G
Great Lakes Castings LLC* **446**
800 N. Washington Ave.
Ludington, MI 49431-2724
greatlakescastings.com
(231) 843-2501

Great Lakes Castings has been a producer of high-quality grey iron castings for 778 years now! We produce castings with weights ranging from 1lb to just over 50 lbs. from low volume to high volume. We feature both horizontal matchplate molding and vertical DisaMatic molding. We feature internal heat treat capabilities that affords very consistent machinability with iron. We feature, short, industry leading lead times. We cover a variety of industrial markets and support OEM's direct or Tier 1/Tier 2 supply chains. Please visit our website at www.greatlakescastings.com.

H
Harmony Castings LLC* **444**
251 Perry Hwy.
Harmony, PA 16037
harmonycastings.com
(724) 452-5811

Harmony Castings offers aluminum V-process castings with thin walls, 125 RMS finish, zero-degree draft, and tolerances half the industry standards. Flask sizes range up to 36" by 48" by 12" over 12". Full CNC machining capabilities, coating and finishing services are available. The company serves the robotics, instrumentation, energy, heavy equipment, medical, military, aerospace, and lighting industries. AS9100 and ISO 9001 certified.

HyPro Inc. **344**
600 Jefferson St.
Waterford, WI 53185
hypro.com
(262) 534-5141

HyPro Incorporated, established in 1969, is a leading Tier 1 supplier of automated, robotic, and manual machining of low, mid and high-volume castings, forgings, complex assemblies, casting procurement and technical engineering support for Ag, construction, mining, marine, off-highway, military, engine OEM's and foundries.

I
Impro Industries USA Inc.* **544**
21680 Gateway Center Dr. Ste. 368B
Diamond Bar, CA 91765-5492
improprecision.com
(909) 396-6525

Impro is a global leading manufacturer of high-precision, high-complexity, and mission-critical casting and machined components for diverse end markets. We supply customized casting and machined products and provide surface treatment services to a well-diversified global customer base. Our global leading position is underpinned by our integrated business model with comprehensive capabilities of offering one-stop solutions to our customers.

K
Kimura Foundry America Inc.* **645**
789 W. Boomer Way
Shelbyville, IN 46176
kimurafoundry.com
(317) 604-5158

Specializing in quality castings optimized with 3D printing technology, Kimura incorporates a long history of foundry success and a patented sand material that enables us to produce top-quality, defect-free rapid prototype castings in as little as 5 business days.

We supply rapid prototype castings made of cast iron, cast steel, aluminum and numerous specialty alloys and our process is ideal for rapid prototyping, small volume production, and service parts when a conventional pattern is not available or applicable.

L
The Lawton Standard Co.* **844**
1950 Enterprise Dr.
De Pere, WI 54115
lawtonstandard.com
(920) 337-2470

The Lawton Standard Co. is the parent company of The C.A. Lawton Co. (De Pere, WI and Minster, OH), Temperform, Penn-Mar Castings, Northern Iron & Machine, American Iron & Alloys (Versa-Bar), and AMSCO Wear Products (SWB Global). We provide iron castings up to 45,000 pounds and steel castings up to 5,500 pounds. We also provide continuous cast iron, bronze, and steel bar and custom designed wear-resistant steel products. Our integrated approach includes casting engineering, tooling design, and machining options to provide a comprehensive solution to meet our customers' needs.

LeClaire Manufacturing Co.* **641**
PO Box 1344
Bettendorf, IA 52722-0023
leclairemfg.com
(563) 332-6550

LeClaire Manufacturing is a single-source sand and permanent mold aluminum casting company. We offer a streamlined, vertically integrated process that eliminates the middleman — and the markup — and lets you source your entire project through a single shop, LeClaire Manufacturing. From molds and patterns to leak testers and machining fixtures, we make them all in-house and subsequently produce the sand castings, permanent mold castings, CNC machining, and ship parts to print to our customers.

Ligon Permanent Mold Group* **652**
3312 Lakeshore Dr.
Sheboygan, WI 53081
ligonpermanentmold.com

The Ligon Permanent Mold Group is a family of 4 World Class Aluminum Permanent Mold Casting Foundries with extensive inhouse CNC machining capabilities. We provide machined complete, and powder coated aluminum castings to a wide range of industries. The LPMG offers aluminum gravity casting, tilt pour casting, low pressure as well as our proprietary pumping casting process. We also offer value added operations such as plating and coating, as well as lite sub assembly when required. Our excellent engineering support to include design for manufacturing assistance as well as solidification mode.

M
Monarch Industries Ltd. **647**
51 Burmac Rd.
PO Box 429
Winnipeg, MB R2J 4J3
Canada
monarchindustries.com
(204) 786-7921

N
Neenah Foundry Co.* **644**
PO Box 729
Neenah, WI 54957-0729
nfco.com
(920) 725-7000

With 150 years of experience, Neenah Foundry Industrial Solutions Group, part of Neenah Enterprises, Inc. (NEI), has consistently maintained our industry leadership, delivering value added casting solutions for our customers in the agricultural, construction, HVAC, material handling, and Industrial markets. Now a wholly owned company of Charlotte Pipe and Foundry, NEI is focused on building on our strong foundry know how; how can Neenah Foundry Industrial Solutions Group help you with your casting requirements?

O
Osco Industries Inc.* **541**
734 11th St.
PO Box 1388
Portsmouth, OH 45662
oscoind.com
(740) 354-3183

Founded in 1872, Osco Industries is medium to high volume Gray Iron foundry.

Osco Industries has an industry leading lead time of just 4 weeks and plenty of open capacity.

We have three foundries all located in Southern Ohio. Two greensand foundries and one Shell Mold foundry. Our molding equipment includes four D3 Disamatic (19x23) mold lines, one Osborn In-liner (16x22) mold line, two Hunter 10 (14x19) and twenty Shalco (15x20) shell molding machines.

Industries served include: A/C & Refrigeration, Sump Pumps, Industrial Power Transmission, Automotive, Agricultural and heavy truck.

P
Pier Foundry & Pattern Shop* **640**
51 State St.
Saint Paul, MN 55107-1408
pierfoundry.com
(651) 222-4461

Pier Foundry is an ISO certified provider of grey iron, ductile iron and austempered ductile iron castings of superior quality, at a competitive price with one of the shortest lead times in the industry.

We offer over 133 years of manufacturing experience, a knowledgeable and friendly sales staff and a full complement of engineering support and technical services. We encourage our customers to get us involved early in the design process and offer assistance in design and castability from concept through production. Let Pier Foundry be the one stop shop for all of your casting needs.

Product Development & Analysis LLC* 341
1776 Legacy Cir. Ste. 115
Naperville, IL 60563-1673
pda-llc.com
(630) 505-8801

For over 30 years, providing casting, process and rigging design and development for complex castings in various alloys and casting processes, advance casting process simulation including residual stress, micro-structure and properties predictions, and casting conversion. Over the past decade offering specialized services for the design for additive, AM and Industry 4.0 adoption, AI/ML driven data analytics and meta modeling for problem solving, intelligent manufacturing and efficiency improvements, contract research, scrap reduction and modernization.

Puller Inc.* 751
3225 Zimmerman Dr.
Bettendorf, IA 52722
(653) 823-6550

R
Rochester Metal Products Corp.* 342
PO Box 488
Rochester, IN 46975-0488
rochestermetals.com
(574) 223-3164

Rochester Metal Products Corp. has been producing quality gray and ductile iron castings since 1937. Our 200,000-square-foot facility is designed to serve a wide range of casting requirements from .75 pounds to 40 pounds. We offer casting design assistance for new products, from original concept to prototyping and final production. Rochester Metal Products Corp. takes great pride in our decades of commitment to meeting our customers' needs through short cycle times, on-time deliveries, joined by consistent quality and competitive prices.

S
St. Croix Castings Inc. 642
415 Best Rd.
Woodville, WI 54028
stcroixcastings.com
(715) 698-2410

St. Croix Castings, Inc. is a family-owned aluminum casting foundry that produces small and mid-volume casting orders in both green sand and permanent mold processes.

St. Marys Foundry Ltd.* 340
405 E. South St.
Saint Marys, OH 45885-2540
stmfoundry.com
(419) 394-3346

Producing gray, ductile and ni-resist quality iron castings ranging from 1000-60,000 lbs. for the oil and gas, pump and valve, and specialty machinery industries.

T
Tooling & Equipment International (TEI)* 447
12550 Tech Center Dr.
Livonia, MI 48150
teintl.com
(734) 522-1422

As a global leader in the engineering and manufacturing of prototype and low volume production machined aluminum castings for automotive, aerospace and many other industries, Tooling & Equipment International – TEI – delivers the utmost in quality and speed to market. TEI products are of the highest quality and are backed by a reputation for innovation, design excellence, and precise first-time performance.

W
Waupaca Foundry Inc.* 441
PO Box 249
Waupaca, WI 54981-0249
waupacafoundry.com
(715) 258-6611

Waupaca Foundry produces iron castings the world uses and trusts. Industry-leading quality, delivery, and innovation with an unmatched commitment to sustainability by offering green castings that assist manufacturers in achieving carbon neutrality targets with a reduction of Scope 3 greenhouse gas emissions. Discover the power of true capacity. Everything you need to outperform.

Wisconsin Aluminum Foundry Co. Inc.* 346
838 S. 16th St.
Manitowoc, WI 54220
wafco.com
(920) 682-8286

Since our beginnings in 1909, we've worked with countless industries to provide them with castings that meet their needs. As a world-class supplier in the non-ferrous casting industry, our work reflects the pride and dedication shared by our team. We exceed expectations with industry leading on-time delivery, lead times, and quality aluminum, bronze, and brass castings across diverse industries.

Celebrating 115 years of hard work and casting excellence!!

Wisconsin Precision Casting Corp.* 350
300 Interchange N.
Lake Geneva, WI 53147
wisconsinprecision.com
(262) 248-4461

Wisconsin Precision Casting is a leading manufacturer of Investment Castings providing a single solution for both production and prototype requirements. Prototypes delivered in 15-30 days - NO casting tooling required. Patterns printed in house utilizing seven 3D printers. Select from 150 alloys in size ranges to 20"x22"x24" and 100 pounds. Engineering support, secondary machining and finishing operations available. Two ISO 9001:2015 plant locations in Lake Geneva and East Troy WI.

AFS Institute Foundry E-Learning

Mold Your Future: State Grants May Fund Your Foundry Skills Training

Discover how
workforce development
grants can offset your AFS
Institute training costs! Explore
options via your state and local
MEP networks, or reach out to
jchristian@afsinc.org
for assistance.

*The AFS e-learning
modules have been
extremely user
friendly and very
helpful, especially for
myself being new to
the industry.*

*"The power that
AFS e-learning
training tools bring
to our company is
limitless."*

*Foundry is a new
industry for me, and
I found that AFS
e-learning classes
are very helpful,
easy to navigate,
and informative.*

Brittany Shackleton
*Human Resources Manager,
Torrance Casting*

Mark Soucie
*President,
Ferroloy*

Kim Hugget
*Manufacturing Assistant,
Dakota Foundry*

Foundry E-Learning is ideal for **training new hires**...not to mention for **cross-training**
and developing promising employees. Customize your own training program with 110 modules
covering all aspects of the foundry.

Contact **Jen Christian** at jchristian@afsinc.org or **847-824-0181** to schedule a free, no-obligation
live demonstration and for assistance with contacting your state for training grants.

AFS Institute Foundry E-Learning

The **AFS Institute** offers **more than 100 on-demand Foundry E-Learning modules** ranging in length from 15 minutes to over an hour, viewable on any device or browser. **Foundry E-Learning modules** focus on practical job skills you can use immediately. Each module is based on adult education best practices and strives to engage you throughout. You can purchase Foundry E-Learning modules in two ways:

Foundry E-Learning Subscription Program

Access the full suite of Foundry E-Learning modules for all your employees at one location. The annual subscription fee is based on the number of employees in your facility:

**\$1,300 up to 100 employees | \$2,600 up to 250 employees
\$5,200 over 250 employees**

Foundry E-Learning Module Individual Access

Foundry E-Learning modules also are available for individual access for 30 days.

**Members - \$55 per module
Non-members - \$110 per module**

Contact **Jen Christian**, Director of Training Solutions, at jchristian@afsinc.org, to discuss your foundry's training needs or to schedule a free, no-obligation demonstration. To register, visit www.afsinc.org/elearning or fill out the form below.

Foundry E-Learning Categories Include:

- | | | | |

Hoosier Pattern

Known for quality of workmanship and commitment to "On Time Delivery," Hoosier Pattern has gained recognition as a premier pattern shop. With some of the latest tools in technology, including five in-house 3D sand printers and over 25 machining centers, HPI is able to provide you with the best quality, pricing and timing. Our highly experienced staff works hand-in-hand with foundries to ensure that all jobs are done right the first time, every time.

Covia Corporation

Foundries depend on Covia's 4+ decades of technical resin coating experience to create formulas that meet their rigorous specifications. Customers can specify and test the sand and the resin to increase productivity of outstanding castings. As the industry's only full-service partner, customers work with Covia foundry experts to solve their complex casting challenges. First-class customer service and advanced logistics complement this prominent product development.

Flexovit USA, Inc.

Flexovit is proud to announce the launch of Capstone™! Capstone™ is a brand new, patent pending, grinding wheel designed as an alternative to Type 6 and Type 11 cupwheels. With four full layers of fiberglass reinforcement, a built-in 20 degree grinding angle, a spin on zinc hub, and its unique shape, Capstone™ is a safer and more versatile option than standard cupwheels. Flexovit USA, Inc. is a manufacturer of high productivity abrasive products for the professional. Contact Jeff Franke, Foundry & Applications Manager, at jfranke@flexovitabrasives.com to schedule an evaluation and demo.

REFCOTEC

REFCOTEC, a second-generation family-owned company has been a proud supplier to the North American metal casting industry for over 30 years. In our Ohio and Texas facilities, we manufacture the highest quality foundry products available on the market including refractory coatings, sand additives, resin systems, pastes, partings, and many more. We specialize in custom product formulation, outstanding technical service, and short lead-times. We have products for every metal alloy and all molding methods. Bring us your casting challenges!

LaempearSM

When being there soon is not soon enough

You rely on your LAEMPE CoreCenter. And you're skilled at keeping it running at peak performance. But when you need us, you need us now...and sometimes that can't wait until tomorrow. With one of the largest technical staff of experts in our market, standing-by to support you, you can now have us there virtually in a matter of minutes. Through technology, we can be with you, seeing what you see, supporting you in real-time. We can guide you in a way that has never been seen in our industry, without ever getting on a plane, regardless of where we are.

2023 – 2024 Officers & Board Members

President
Bradford Muller

Vice President of Corporate Communications
Charlotte Pipe & Foundry

Vice President
Angela Schmeisser

Managing Director
St. Marys Foundry, Inc.

2nd Vice President
David Gilson

Sales and Marketing Director
SinterCast

Immediate Past President
Adam San Solo

President
Adam San Solo & Associates

CEO
Doug Kurkul

American Foundry Society

Directors Class 2020 - 2024

Rob Johnson

Executive Vice President - Administration, CFO, and Treasurer
Waupaca Foundry

Jim Mancuso

Vice President
Mancuso Chemicals, Ltd.

Andrew C. Renkey

V-Process Foundry Group President
Ligon Industries LLC

Peter Satre

Manager – Corporate Engineering
Allied Mineral Products

Directors Class 2021 - 2025

Laura Bartlett, PhD

Wolf Associate Professor of Metallurgical Engineering
Missouri University of Science and Technology

Kiley Eck Hayon

President
Eck Industries, Inc.

Jay M. Morrison

Vice President of Equipment Sales/ Eastern Region Sales Manager
Carpenter Brothers Inc.

Liz Ulman

Director, Employee Communications & Initiatives
MacLean Power Systems

Directors Class 2022 - 2026

George Boyd, Jr.

Managing Member
Goldens' Foundry & Machine Co.

Alan Brink

President
Spring City Electrical Mfg. Co.

Michael Halsband

President & CEO
Roberts Sinto Corp.

Bill Nestel

Vice President of Manufacturing
Rochester Metals Corp.

Directors Class 2023 - 2027

Matt Cook

Chief Operating Officer & Executive Vice President
Amsted Rail

Brett Fisher

President
Foundry Solutions & Design, LLC

Earl Miller

Director of Engineering and Innovation
Hiler Industries

Amanda Torkelson

Vice President
Alu-Bra Foundry, Inc.

2024 – 2025 Officers & Board Members

President
Angela Schmeisser

Managing Director

Vice President of Marketing & Business Development

Chris Oswald
Senior Director of Accounting & Finance

Cathy Potts
Senior Director of Human Resources & Administrative Services

2024 Awards

Gold Medal

Henry Lodge

Chairman of the Board, Lodge Manufacturing Co., South Pittsburg, Tennessee

The **Peter L. Simpson Gold Medal** ... For his outstanding contributions in promoting public esteem that reflects tremendous positive credit on the metalcasting industry through his leadership within his company and AFS at the local, regional, and national levels.

Jeet Radia

Senior Vice President, McWane Inc., Birmingham, Alabama

The **Thomas W. Pangborn Gold Medal** ... For his outstanding contributions in developing, guiding and enhancing environmental health and safety in the metalcasting industry and broadly sharing knowledge with many hundreds of others throughout the industry.

Award of Scientific Merit

Liam Miller

Technical Director-Specialty Sands R&D, Minerals Technologies Inc./American Colloid Co., Hoffman Estates, Illinois

The **AFS Award of Scientific Merit** ... For his significant scientific contributions to the metalcasting industry through his research, mentorship, papers, and presentations on important sand molding topics.

Service Citations

Michael Buyarski

COO, The Federal Metal Co., Bedford, Ohio

The **AFS Service Citation** ... For his exceptional service to the metalcasting industry through contributions to the AFS Copper Alloy Division and involvement in developing lead-free copper alloys.

Dr. Mark Osborne

Senior Casting Engineer, Wabtec Corp., Fort Worth, Texas

The **AFS Service Citation** ... For his outstanding service to the metalcasting industry through his many technical contributions to metalcasting technology, including nine patents, and his leadership in the AFS Light Metals Division, Research Board, and Technical Council.

Brian Rachwitz

Quality and Technical Services Manager, EJ, East Jordan, Michigan

The **AFS Service Citation** ... For his meritorious service, mentorship, and leadership above and beyond his role at his company, through key roles on AFS technical committees, councils, boards, speaking at conferences, and leading high-impact industry research projects.

AFS Millionaires Safety Award

AFS congratulates the following AFS Corporate Member for achieving a million or more safe-hours worked without incurring a lost time injury or illness during the calendar year 2023:

Grede Castings - New Castle
(New Castle, IN)
1 million safe-hours

Le Sueur Incorporated
(Le Sueur, MN)
1 million safe-hours

AFS Individual Member Benefits

Workforce & Career Development

Leadership Training & Sustainability

- AFS trains the current and future leaders of metalcasting

Building the Next Generation of Metalcasters

- Student chapters, Institute training, foundry demonstrations, Melting Point magazine and more attract new talent to the industry

Regional Chapters

- Only individual members may join AFS regional chapters

Casting Connection

- Individual members can network, ask questions and get answers from peers through this metalcasting social network

Event Discounts

- Deep discounts on registration for educational and networking events hosted by AFS (discounts vary)

Education

Instructor-Led Training

- Receive discounts on classes (in-person and online) for new and experienced metalcasters (\$200 discount per person)

Foundry e-Learning Modules

- Receive discounted rate of \$55 per module (half off the general rate of \$110)

Free AFS Members Only-Webinars

- All individual members participate in 30+ technical and management webinars per year (\$250 value per session)

Technical/Management/Research Support & Innovation

Committee Membership

- Only individual members are eligible to sit on AFS committees, which conduct cutting-edge research and help establish industry standards

Books & Publications

Modern Casting

- A subscription to one of the industry's leading trade magazines, delivered monthly (\$115 value)

Book Discounts

- Get 25% discounts on all AFS-published technical books

AFS Library

- Receive free online access to the AFS Library, the world's largest collection of metalcasting research with more than 17,000+ papers and articles

AFS Insider News

- Stay up-to-date on industry news and AFS events with this weekly e-newsletter

I desire affiliation with the following AFS Chapter _____

Do you wish to receive *Modern Casting* magazine? (*For Metalcasters*) ☐ Yes ☐ No

Do you wish to receive *Casting Source* magazine? (*For Industry Suppliers*) ☐ Yes ☐ No

Which best describes your business?

- ☐ Producer of metal castings (foundry, diecaster, ect.)
- ☐ Pattern and tooling shop
- ☐ Supplier of metalcasting equipment, raw materials or services
- ☐ Consultant/consulting engineer
- ☐ Research institute/testing lab
- ☐ Casting user/designer/buyer
- ☐ Educational institute/facility/military
- ☐ Other _____

What metals do you primarily work with?

- ☐ Iron
- ☐ Steel
- ☐ Aluminum
- ☐ Copper-base (brass, bronze, ect.)
- ☐ Magnesium
- ☐ Zinc
- ☐ Other _____

What is your reason for joining AFS?

- ☐ Boost career success & professional development
- ☐ Maximize my technical knowledge
- ☐ Deep discounts on AFS events and books
- ☐ Strengthen my professional network

- ☐ Participate in an AFS committee
- ☐ Support the important work of AFS
- ☐ Other _____

Payment Information

☐ Check enclosed (U.S. funds only) ☐ Bill company **Charge to:** ☐ American Express ☐ Mastercard ☐ Visa

Membership Length: ☐ One Year ☐ Two Years

The following information is required to charge your membership:

Account Number	Exp. Date	Security Code
Signature		Date

Return completed application to:

American Foundry Society | 35169 Eagle Way | Chicago, IL 60678-1351
Tel: 1-847-824-0181/1-800-537-4237 | Fax: 1-847-824-7848 | www.afsinc.org | e-mail: AFSmembership@afsinc.org

AFS Corporate Member Advantage

For Metalcasters

Industry Intelligence

Bi-Annual Metalcasting Forecast

- This crucial marketplace outlook is free to Corporate Members (\$1,000 value)

Wage and Benefit Survey

- Key compensation information, free to participating Corporate Members (\$1,000 value)

World Foundry Organization Annual Census

- A look at the state of the worldwide metalcasting industry is delivered free to Corporate Members

Employment Law Update

- A monthly summary prepared by our partner law firm to keep you apprised of key developments concerning OSHA regulations and inspections, NLRB decisions, wage-hour rules, pending workplace legislation and many more topics.

EPA, OSHA and Public Policy Advocacy Webinars

- Quarterly webinars on Key Policy Issues Affecting Metalcasters.

Workforce & Career Development

Leadership Training & Sustainability

- AFS trains the current and future leaders of metalcasting

Building the Next Generation of Metalcasters

- Student chapters, Institute training, foundry demonstrations, Melting Point magazine and more attract new talent to the industry

Regional Chapters

- Individual members may join AFS regional chapters

Casting Connection

- Members can network, ask questions and get answers from peers through this metalcasting social network

Industry Job Descriptions

- AFS' complete, detailed list of metalcasting industry job descriptions is available for Corporate Members to use for recruiting, evaluations, or other workforce needs

Metalcasting Job Board

- Corporate Members get a 50% discount when they post jobs on the AFS Job Board

Event Discounts

- Save on registration for educational and networking events hosted by AFS (discounts vary)

AFS Energy Program

- Corporate Members can reduce their electricity and natural gas supply costs

Government Advocacy

Legislative Influence

- On Capitol Hill, AFS shapes a better business climate for metalcasters

Education

In-Plant Training

- Corporate Members receive special rates on in-depth training at their facilities (10% off is the discounted rate)

Instructor-Led Training

- Receive discounts on classes (in-person and online) for new and experienced metalcasters (\$200 discount per person)

Free AFS Members-Only Webinars

- All individual members and employees of Corporate Members participate in technical and management webinars (\$250 value per session)

Foundry E-Learning

- Only Corporate Member companies are eligible to a discounted subscription for unlimited access to AFS Institute e-Learning in English and Spanish (at an additional cost on an annual basis)

Technical/Management/Research Support & Innovation

Driving Research

- 8% of corporate dues support AFS research

Committee Membership

- Individual members are eligible to sit on AFS committees, which conduct cutting-edge research and help establish industry standards

Technical Assistance

- The AFS technical services team is ready for your calls on technical, metallurgical, and EHS questions, as well as casting design assistance, with top priority going to Corporate Members

HR Consulting

- AFS provides foundry-specific insights and assistance for your human resources needs

Energy Consulting

- AFS can help with questions about energy costs, consumption and efficiency

Books & Publications

Modern Casting

- A subscription to one of the industry's leading trade magazines, delivered monthly (\$115 value)

International Journal of Metalcasting

- A subscription to AFS' metalcasting research journal (\$199 value)

Book Discounts

- Get price breaks on AFS-published technical books (discounts vary)

AFS Library

- Receive full online access to the AFS Library, the world's largest collection of metalcasting research papers and articles

AFS Insider News

- Stay up-to-date on industry news and AFS events with this weekly e-newsletter

AFS Nonferrous Bulletin

- Keep yourself informed about nonferrous news and events through this newsletter, available in both print and digital formats.

Business Opportunities & Branding

Trade Show/Exhibit Space Discounts

- Save money on exhibits and attendance at CastExpo and Metalcasting Congress (discounts vary)

Referrals

- AFS refers all phone, e-mail and online inquiries to Corporate Members

Logo

- Corporate Members can add credibility to their business by using the AFS logo on brochures and websites

AFS Shipping Solutions

- Take advantage of shipping savings and more with AFS' shipping program (savings vary)

Casting Source Directory

- Online and Print: Corporate Member metalcasters are featured in the Casting Source Directory.

Casting of the Year

Power Frame

St. Marys Foundry, Ltd.
(St. Marys, Ohio, USA)

Material:

Ductile ASTM A395 60-40-18

Process:

Gravity Pour - Nobake sand

Weight:

6,600 lbs.

Dimensions:

67.4 in. x 53.4 in. x 43.6 in.

Application:

Frac. pump frame

Outstanding

Achievement:

MY2021 Acura-TLX Steering Hanger Beam (SHB) Assembly

Meridian Lightweight Technologies
(Strathroy, Ontario, Canada)

Material: AM60B magnesium alloy

Process: High pressure die casting (HPDC)

Weight: 5.43 kg.

Dimensions: 34 mm. x 154 cm. x 70 cm.

Application: Provides the first-rate rigidity and safety with weight reduction and energy management.

Best Example

of a Conversion

Row Cleaner Shoe

Lethbridge Iron Works
Company Ltd.
(Lethbridge, Alberta, Canada)

Process: Greensand (Hunter 10)

Weight: 7.3 lbs.

Dimensions: Approx. 8 in. x 7 in. x 6 in.

Application: Agriculture Equipment - removes debris from the seed trench while seeding.

Best in Class

Battery Electric Vehicle Semi-Trailing Arm

Linamar Structures
(Fruitport, Michigan, USA)

Material: A356-T6 Aluminum

Process: Green sand molding

Weight:

23.5 kg. cast/19.6 kg. mach.
(51.8 lb. cast/43.2lb. mach.)

Dimensions:

656.10 mm. x 724.27 mm. x 325.43 mm.

Application: Rear chassis/Suspension arm

Newcomer of the Year

GSI Transit Truck Set

Amsted Rail - Granite City
(Granite City, IL, USA)

Material: 2% Nickel Steel

Process:

No Bake Sand - 3D Print

Weight:

3,150 lbs. and 2,200 lbs.

Dimensions:

56 in. x 145 in. x 26 in. and
31 in. x 117 in. x 23 in.

Application:

Provide support and mobility to cars.

Best Prototype or Innovation
Anchor

Matthews International
(Pittsburgh, Pennsylvania, USA)

Material: Custom Bronze Alloy
Process: Sand casting
Weight: 14.6 lbs.
Dimensions: 20 in. x 12.5 in. x 3 in.
Application: A piece to be used for architectural or memorial functions – depending on customization.

Honorable Mention
Bearing Housing

Impro Industries
(Diamond Bar, California, USA)

Material: Ductile iron
Process: Green sand molding
Weight: 9.85kg
Dimensions: 13 in. x 10.5 in. x 5 in.
(328 mm. x 265 mm. x 129 mm.)
Application: Transmission system of Commercial Vehicles

Honorable Mention
Diversion Valve Body

Lee Brass Acquisitions LLC.
(Anniston, Alabama, USA)

Material: C89833
Process: 3D printed sand mold
Weight: 17.8 lbs.
Dimensions: 9.5 in. x 5.19 in.
Application: Used in the waste water industry.

Honorable Mention
V12 Outboard Engine Oil Sump

Watry Industries LLC
(Sheboygan, Wisconsin, USA)

Material: A356.0 - T6
Process: Reverse Tilt Semi-Perm Mold
Weight: 51 lbs.
Dimensions: 23 in. x 18 in. x 15 in.
Application: Reservoir for engine oil.

Upcoming AFS Conferences

2024 Advanced Waste Seminar
May 15 – 16, 2024 | Schaumburg, IL

This seminar is for individuals with a basic knowledge and understanding of EPA RCRA/solid waste regulations and waste characterization. It will build on basic knowledge with advanced practical knowledge, tools and techniques needed to address relatively complex foundry waste and beneficial use issues. This two-day seminar will cover the following topics regarding foundry waste AND byproducts: regulatory overview, identification & characterization, onsite management, storage and shipment, generator treatment, end users/TSDFs, and compliance demonstration.

2024 Government Affairs Fly-In
June 11 – 12, 2024 | Washington D.C.

Issues on Capitol Hill have millions of dollars of implications for your company, including taxation, Buy America, trade enforcement, workforce policies, EPA rulemaking, and OSHA regulations. Each year, AFS members from across the entire supply chain gather to advocate for the metalcasting industry, grow the metalcasting economy, and get an inside look at policies that affect the industry.

2024 AFS Talent Development & Retention Summit
June 19 – 20, 2024 | Schaumburg, IL

Talent development and retention is crucial to the success of the metalcasting industry. In fact, AFS Quarterly Surveys document that overcoming the talent shortage is the greatest challenge facing our industry. Now is the time for your company and our industry to come together for solutions!

Join other metalcasting professionals for the AFS Talent Development & Retention Summit in Schaumburg, Illinois on June 19-20. As an attendee, you will gain the following benefits:

- Strengthen your ability to plan for succession in your company and to retain employees.
- Gain insight from a foundry industry veteran about supervisor development training principles.
- Bolster your understanding of live shooter prevention and response best practices from a nationally recognized expert. What you learn could save lives!
- Receive a briefing on where the foundry industry has been, where it is today, and where it is headed!
- Participate in a discussion about worker attraction and retention best practices.

The Talent Development & Retention Summit is also offering a special buy one registration, get one registration 50% off for attendees from the same organization. To take advantage of this offer, please call customer service directly at (800) 537-4237.

2024 Chapter Officers Conference
July 23 – 24, 2024 | Schaumburg, IL

Save the date and assemble a delegation to represent your AFS chapter at the Chapter Officers Conference at AFS headquarters in Schaumburg, IL. In addition to a fun social event at Topgolf the evening of July 23, chapter leaders from all AFS chapters will convene on July 24 to discuss best practices in meeting planning, communications, recruitment, student engagement, and more. There will be a comprehensive overview of AFS membership benefits as well as the resources available to you as chapter leaders.

2024 Foundry Industry 4.0 Conference
July 30 – 31, 2024 | Milwaukee, WI

Industry 4.0 is here. Forward-thinking metalcasters are leveraging innovation and technology to boost productivity, profits, and worker safety right now. Attend our upcoming conference to discover practical strategies to implement Industry 4.0 in your foundry or die casting facility. Learn how data-driven manufacturing, automation, and workforce training can future-proof your operations for sustained success. Network with industry experts and walk away with an action plan tailored to your unique goals.

2024 Foundry Leadership Summit
September 22 – 24, 2024 | Colorado Springs, CO

Mark your calendars for the premier metalcasting industry Leadership Summit. Enjoy networking with a friendly group of nearly 150 leaders from across the metalcasting supply chain and hear from world-class speakers discussing leadership, economic, workforce, technical and political issues that go to the heart of leading your business.

All this at one of the nation's premier 5-star resorts! Registration will open in spring 2024.

36th Environmental, Health and Safety Conference
October 1 – 3, 2024 | Grand Rapids, MI

The AFS Environmental, Health and Safety (EHS) Conference returns for its 36th year as the premier event for foundry industry EHS professionals. Taking place October 1-3, 2024, at the Amway Grand Plaza in Grand Rapids, Michigan, the conference brings together leading experts and peers to discuss the latest developments, innovations, and best practices in foundry EHS. From foundry case studies to updates from Washington D.C. to networking with other professionals, this event has what you need to enhance your knowledge, EHS programs, and performance.

2024 Aluminum Specialty Conference
October 15 – 16, 2024 | Mars, PA

Expand your knowledge of the aluminum metalcasting industry at the 2024 AFS Aluminum Specialty Conference. This conference will feature experts in molding, melt prep, casting process controls, and post-casting processes with the newest knowledge broken down to target engineering, operators, and plant managers making this a must-attend for all foundry personnel and casting users.

METALCASTERS:

SUPPLIERMARKETPLACE.NET

2024 AFS Young Professionals Annual Meeting

October 28 – 29, 2024 | Charlotte, NC

Join fellow young professionals from across the metalcasting supply chain at the 2024 AFS Young Professionals Meeting. Attendees will learn key tools to help them grow as a metalcasting professional and prepare for leadership roles.

2024 Melting Conference

November 6 – 7, 2024 | Louisville, KY

Hosted by the AFS Melting Methods & Materials Division, the 2024 Melting Conference brings together industry experts to share their insights in various melting applications. Sessions will cover a wide range of topics, including cupola and electric melting practices, holding applications, melt efficiency, melt deck and furnace safety, refractory applications and best practices, labor retention, supply chain challenges, and energy efficiency.

CastExpo 2025

April 12 – 15, 2025 | Atlanta, GA

CastExpo 2025 is your chance to connect with suppliers, peers, and customers. Catch new ideas to excel at your job and improve your business. Take advantage of the heralded technical and management sessions, plus AFS Institute courses, keynote speakers, shared interest group meetings, and the AFS Hub on the exhibit floor.

Additionally, World Foundry Organization (WFO) will co-locate with AFS and present the 2025 World Foundry Technical Forum in Atlanta. The WFO is the recognized center of strategic foundry knowledge at the global level, designed to develop, enhance and improve the production of metalcastings through the latest technical and sustainable industry practices. The World Foundry Technical Forum is held once every two years.

Upcoming AFS Institute Courses

Gating and Riser Design 101

Live Online | May 7 – 9, 2024

Casting quality and yield are directly impacted by gating design. This course guides participants through the basic functions of gating and risers to provide clean, sound and functional castings.

Casting Cost Estimating

Live Online | June 17 – 19, 2024

Cost estimating is a critical factor in ensuring a manufacturer continues to acquire customers and remains profitable.

AFS Institute In-Plant Training provides you with high-value, immediate-impact, best-in-class, unbiased, and professional training **at your facility for an affordable price**. It is the best way to deliver new skills training to a large group of employees. In-Plant Training provides you with the ultimate in convenience: no employee travel expenses and a familiar environment while maximizing training efficiency and value.

In-Plant Training offers:

- Customized training to fit your company's workforce needs
- Efficient, cost-effective skills training for a large group
- Hands-on, engaging activities to reinforce skills development
- Team-building opportunities across roles and departments

NEW: Introduction to Supervisor Development available now.

Special pricing available for AFS Corporate Members.

For more information on **In-Plant Training**, visit www.afsinc.org/in-plant-training.

To schedule your **In-Plant Training**, contact **Jen Christian** at jchristian@afsinc.org.

Please join us next year at

CASTEXPO

& METALCASTING CONGRESS

April 12 – 15, 2025

Georgia World Congress Center, Atlanta, GA

CastExpo 2025 is your chance to connect with suppliers, peers, and customers. Catch new ideas to excel at your job and improve your business. Take advantage of the heralded technical and management sessions, plus AFS Institute courses, keynote speakers, shared interest group meetings, and the AFS Hub on the exhibit floor.
